

## Circles of power IV

### E 82) Agriglyph in Italy in June 2012:

The letter E is the initial of the word Estudio or study.

In the region of Poirino, there is this agriglyph, which was deciphered, from the ASCII code format (American Standard Code for Information Interchange), the word Enki-Ea, which is a reference to a Sumerian god

"Lord of the Earth, God of water and creator of humanity." This information was obtained by the "reading" of the codes that protrude from the star's recesses. However, there are subdivisions in the star.

Inside the large central Circle 21 parts, + 7 tips of the inner small star, + 7 external star tips, in a subtotal of 35 parts, and plus the Dark Central Circle, which totals in 36. Let's get back to our old acquaintance, big August '8<sup>th</sup> of 2008, where in each of its "rings" are represented 42 worlds that evolve together. But there, these 6 sets of 7 worlds are represented with their primitive worlds (7<sup>th</sup> worlds). And, if in the amount of 42 is subtracted 6, which is the amount of the primitive worlds in the 6<sup>th</sup> sets, we have then 36, which is what is represented also here. So we can observe, that what is in the agriglyph above are 6 sets of 6 types of worlds, where none of them has yet, through their school World (6<sup>th</sup>), reached the respective primitive World (7<sup>th</sup>) of the sets, although the primitive worlds are always of knowledge more evolved worlds than the school planets, for the worlds are created and worked by other worlds of greater evolution, so that life is made and developed, that in short is the action of force over matter, and on humans, the

power of the spirit over the matter for the evolution of that in the transformation of this. It can be said then, that creation and even the care of a world of greater evolution towards another of lesser evolution is a service of universal public utility. If there are 14 (tips) + 3 (center circles) we get 17 and if we do  $21 - 3$  we will get 18. The letter "E" is study.

## **E 83) the "Claws" and the Spiritual classes:**

[Http://www.lucypringle.co.uk/photos/2008/uk2008by.shtml#pic2](http://www.lucypringle.co.uk/photos/2008/uk2008by.shtml#pic2)

Drawing of August 2008 in Cherhill, Wiltshire, England.

As August is the 8th month and the year also has "8", the builder spirit of the agriglyphs gives us more of this idea of universal logic. We have represented 8 "claws" and more to the center 8 "petals" which gives us the amount of 16. In the center, there is 1 circle, so we have a total of 17, which takes us to the 17th spiritual category. In other words, in the doctrine of Christian Rationalism the 17 evolutionary classes are reported, and until 17th the spirit makes its progress necessarily reincarnating in worlds of material life. Above this category the spirit will only reincarnate to increase the progress of these worlds, because life in material way is no longer going to have anything to teach it, because it has already developed the 11 attributes. But beware, there is more here: there are 8 "claws" + 8 white parts in the "claws", + 8 "petals", + 8 white parts in the "petals" and + 1 center circle, a total of 33. The number 33 represent the 33 spiritual categories that evolve working in our universe. These spiritual categories, including notes on the 17th category and the worlds and their spiritual categories, as well as the logic as the 8th attribute of the spirit, are reported in the books "Christian Rationalism" until the 43rd edition of 2004, edited by the Redeptor Center of the city of Rio de Janeiro-Brazil.

## **E 84) attributes, spiritual classes and worlds:**

[Http://www.lucypringle.co.uk/photos/2008/uk2008ax.shtml](http://www.lucypringle.co.uk/photos/2008/uk2008ax.shtml)

Drawing of July 2008 in East Field, Wiltshire in England.

There are 11 dark internal parts, alluding to the 11 attributes of the spirit. There are also + 5 inner circles that adding up to the 11 we get 16, which added to the large green circle provides us the amount of 17, alluding to the first 17 spiritual classes. If we add to the 17 + the outer light circle, we get 18, in a reference to the 3 sets of six worlds. Now if we consider, by a logical projection of the drawing, that there are 6 internal light circles instead of 5, we get in total the amount of 19 in a reference to 2 sets of 6 worlds and 1 set with 7 worlds, this one already, with its primitive World (7th) found by its School Planet (6th), for I understand that only after the school world have found the primitive world is that this is accounted as existing in the sets, because then it becomes complete with all worlds knowing about the existence of Class 7, the latest planet now in the sets. Naturally, with its gradual evolution this world will necessarily become a school world replacing the world that until then occupied that category in the sets, because this then will occupy the place of dense world. In other words, there are functions in the universe and in the sets, that cannot fail to be done, and the worlds must necessarily pass on these evolutionary nature functions to the spirits of the later worlds in the sequence of the hierarchy, as well as they receive more advanced functions from more advanced worlds in the natural sequence of the hierarchy. That's why the sets float between 6 and 7 worlds all the time.

## **E 85) Shades:**

[Http://www.lucypringle.co.uk/photos/2009/uk2009at.shtml#pic2](http://www.lucypringle.co.uk/photos/2009/uk2009at.shtml#pic2)

Drawing in England in June 2009 at Knoll Dow-nr Beckhampton, Wiltshire.

If we count only the circles we get 9, in a reference to the nine planets which already have only spiritual life in the 3 sets, which evolve more closely, that could be of 6 or 7 planets. If we count only 8 circles, without the center circle, + the 4 "buds" we get 12, in a reference to the 12 planets where material life is still present in the 3 sets of 7 planets, sets that evolve more closely. If we count the 8 lines that make up the "buds" + 9 circles we get 17, in a reference to the first 17 spiritual categories. If the in amount of 17 we add the green circle, delimited by the center by the lines of the "buds", we obtain 18, alluding to the 18 planets components of the 3 sets of 6 planets each. That is, sets without the primitive planet, or rather, sets where the Planet School (6th) haven't found the respective primitive planet (7th) of its sets yet. I understand that even more advanced worlds than the school planet in each set work in the preparation of the respective primitive world, waiting for the School World (6th) to develop in the astronomical and aerospace sciences to be able to get in touch with the primitive world fits sets.

## **E 86) The 4 Parts and the 18 worlds:**

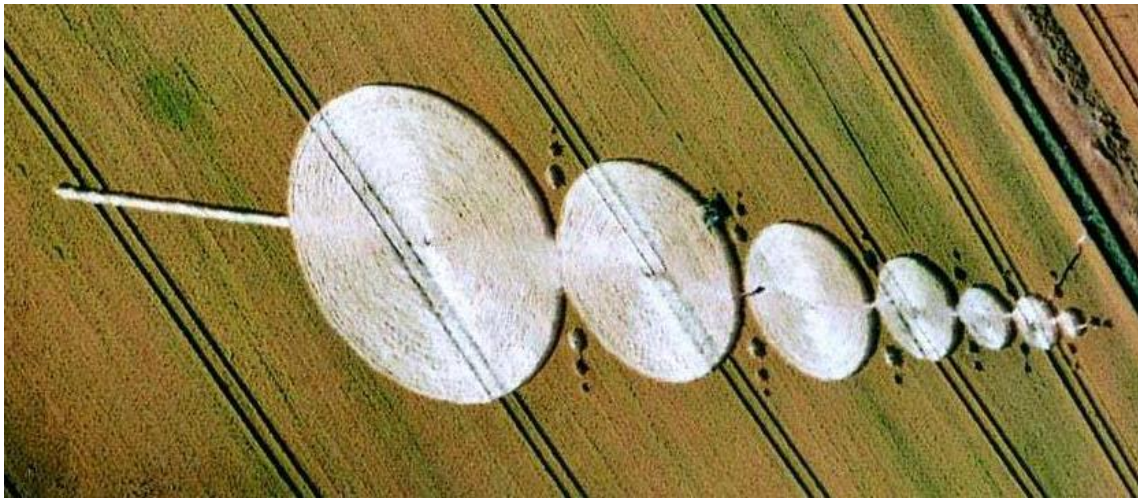

[Http://www.lucypringle.co.uk/photos/2011/stonehenge3-cropcircle-2011.shtml#pic2](http://www.lucypringle.co.uk/photos/2011/stonehenge3-cropcircle-2011.shtml#pic2)

July drawing of 2011 In England at Stonehenge (3), Nr Amesbury – Wiltshire.

We can observe that there are at the center of this formation 4 characters that repeat themselves 3 times. This gives us a sum of 12. That is, we get, in the first analysis, the representation of the 4 types of worlds where physical life is still present in the 3 sets of 7 types of worlds, each one of them, which evolve together nearer. On the other hand, we have on the outer perimeter plus 6 that add up to 12 gives us the amount of 18. So, we make a new analysis, that is, that we have now, with the amount of 18 the representation of 3 sets of 6 types of worlds, where the 6 worlds represented more externally are 3 worlds of Pure Light (1st) and the 3 Diaphanous worlds (2nd) of the 3 sets. By being represented with six worlds, still their Worlds schools (6th) did not reach the Primitive Worlds (7th) corresponding to each of the 3 sets. The most evolved worlds are, most of the time, represented involving the worlds of lesser evolution, because the one who is involved denotes a position of lesser evolution and thus represents the hierarchy between the various planets. It is also noted that the parts of the drawings are "complementary", this means to me that, what a world does not have in the matter of progress, suffering or difficulties, another world has, because each one of them is in an evolutionary stage and the work of the spirits in the worlds is what levers the progress of these worlds and while working the spirit debugs and improves its 11 attributes by conquering the obstacles and eliminating them for future generations, by making the living in the planets more and more mild.

## **E 87) 6 Sets of 6 planets + 1 Planet Class 7:**

[Http://www.lucypringle.co.uk/photos/2005/uk2005bs.shtml](http://www.lucypringle.co.uk/photos/2005/uk2005bs.shtml)

Agriglyph July 2005 in East Field, Wiltshire, England.

We have above the representation of 7 types of worlds composing a set. But there are 30 more small circles and if we add them all together, we get 37. In the great "8" of August 2008 we have in each "ring" 42 worlds, which we already know that refer to 6 sets with 7 types of worlds, in other words, 6 worlds + the primitive world. According to my study of No. 64 (The 148 triangles), as the 6 sets act together, it turns out that one of them may have already reached its primitive world (7th) through its school world (6th), so we have the configuration of  $6 \times 6 = 36$ , but if we add the primitive world to one of these sets we get 36 planets + 1, which gives us then the amount of 37 planets as it is above in the Agriglyph. That is, the sets will add the primitive world as they evolve, so that the school planets can also evolve, and the primitive planets take their places and, in a distant future also become able to locate, visit and assist another primitive world such as I describe in my study No. 17 (A logical message in a beautiful drawing). It is a continuous process of progress where the sets extend when its school world encounters the primitive planet and shrinks when this is lifted to the school world category. And this world can only progress, and therefore all in the sets, when a new primitive world is found by it. And this primitive world has been worked for millenniums by the other more evolved planets in the sets and it's waiting the moment of its "discovery" by the school world. We have the knowledge that the angle formed by the main axis of the figure and the tractor tracks are is 42 degrees. We also have 6 tracks of cereal and + 7 tractor tracks, which as they are doubles we can do  $2 \times 7$ , where we get 2 sets of 7 types of worlds. The 6 represents 1 sets with 6 types of worlds or a Class 6 world like Earth.

## E 88) A complex Agriglyph?

[Http://www.lucypringle.co.uk/photos/2012/woodborough-cropcircle-2012.shtml#pic2](http://www.lucypringle.co.uk/photos/2012/woodborough-cropcircle-2012.shtml#pic2)

In this June 2012 drawing on Woodborough Hill, Alton Barnes, Wiltshire In England, we have three sperm-like formations. In the most central circle of all of them we have well ahead a 9-part subdivision. These in my view indicate a reference to the 9 worlds of already only spiritual life present in the 3 sets of 6 or 7 worlds. There are also 3 light-dark central circles that add up to the 9 fillets provide us with the amount of 12, in an allusion to the 12 worlds of still physical life present in the 3 sets of 7 planets. We have beyond this amount of 12, + 3 "buds" and + 2 lateral projections, which add up to 17 in a reference to the first 17 spiritual categories. If we add 17 + 1 Clear Circle (between the 2 cones) we get 18 in a reference to 3 sets of 6 worlds each. If we add 17 + 2 cones We get 19 in a reference to the 2 sets of 6 worlds + 1 sets of 7 worlds, this 1 sets that already counts with its primitive World (7th) Incorporated, ie the world Class 6 or school of one of these 3 sets has already discovered the corresponding primitive world. If we add up all the light circles of the three tails, we get 21, in a reference to the three sets of seven planets. If we add up all the elements inside the big circle, we get 20, and as are 3 we have then 60. We have + 18 circles that form the "tails", then  $60 + 18 = 78$ . It is observed that we also have encrusted in each end part of the "tails" + 6 figures type cones. So,  $78 + 6 = 84$ . And to conclude we say that in the great "8" of August 2008 are represented 84 planets, 42 planets per ring, or a total of 12 sets of 7 planets. The latest world of the 6-planet sets is the school (6th) equal to the category of the Earth. Only after this school planet finds a primitive world (7th) is that the sets come to count with 7 worlds. The Primitive World It already exists, but it depends on the progress of the Class 6 worlds to be discovered, because the last planet that will know, in the sets, of the existence of the primitive (7th) is the Planet Class 6. We can also perform the following calculation: Within the larger circles the number of elements is 20, which multiplied by 3 we obtain 60, from where we can take that  $6 + 0 = 6$  or is a reference to the similar class 6 worlds in evolution to Earth. The

earth is highlighted because it is the next Class 6 planet to find the primitive Planet Class 7 of its sets. If we add up all the circles of the "tails" from its first and largest clear circle to the occurrence of the cones, in its almost final, we obtain 11 circles which is a reference to the 11 attributes of the spirit. The design is divided into 3 to warn us that the worlds evolve in three-in-three, according to the great "8" of August 2008. In other words, the most evolved one goes ahead, followed by the two hierarchically less evolved.

## **E 89) The 5 Inscribed Triangles:**

<http://www.lucypringle.co.uk/photos/2012/liddington-cropcircle-2012.shtml#pic3>

In this agriglyph in the locality of Wanborough Plain, nr Liddington, Wiltshire In England we have 5 overlapping triangles enrolled in a circle. We will initially work with the quantities of one of the 3 sides of the triangle that is subdivided into 3 and each of these 3 equal parts is subdivided into 12 parts. We therefore have  $12 + 1$  side of the outermost triangle = 13 and + 4 parts of the tip of the other triangle that protrudes, then adding 17 parts. This 17 means to me the 17 evolutionary classes that are necessarily reincarnated for learning in the School Worlds (6th). As we have 3 times this amount I seem to have here again the idea that 3 worlds School will unite just as I deduce in my study of No. 7. If we add to the 17 the two clear parts that flank the ends and plus the 2 semi green circles we get 21, in a reference to the 3 sets of 7 planets. And as this disposition repeats three times we have  $21 \times 3 = 63$ . Now if we add to the  $63 + 6$  tips, we get 69 and if we add more the 3 internal triangles we have 72. This amount means 12 sets of 6 worlds, i.e. sets without their Primitive Worlds (7th), as we have in the great "8" of August 2008 84 worlds i.e. 12 sets with 7 worlds each, this is sets with their respective primitive worlds. If we

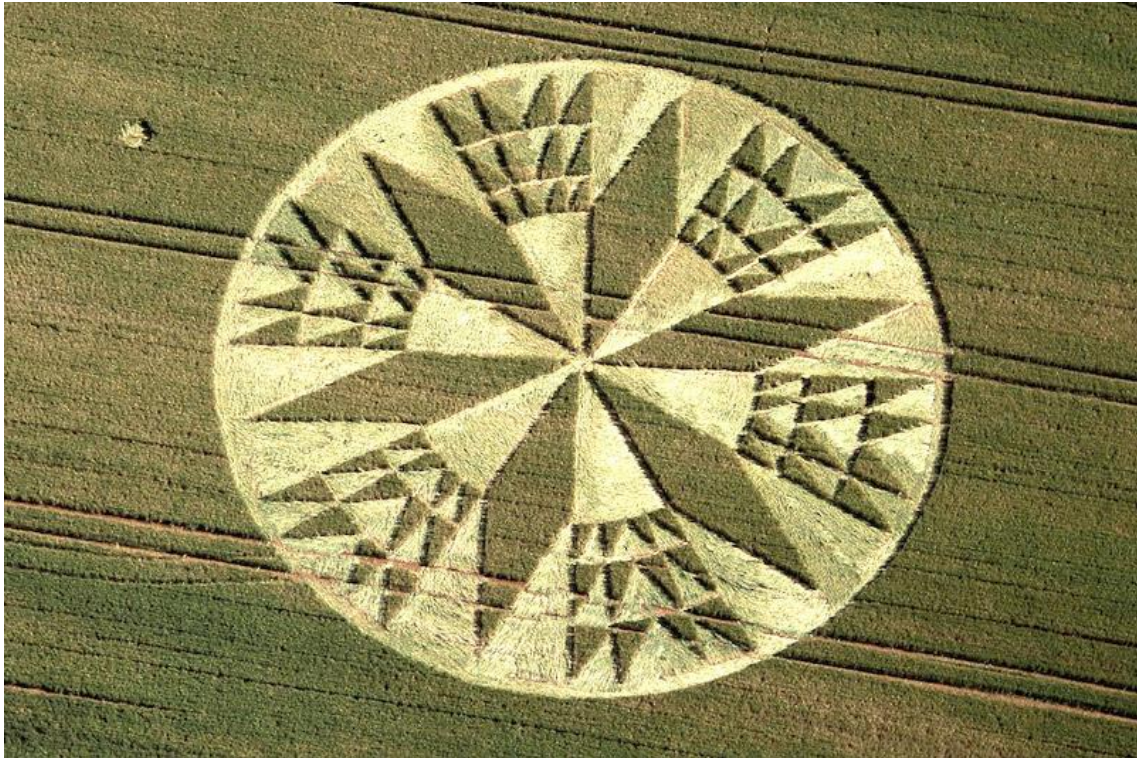

add 6 tips plus the 5 triangles we get 11 in a reference to the 11 attributes of the spirit. We can also "see" in the figure above 7 triangles in a reference to the Primitive World (7th) that will become important in our future history. In 72 worlds we have 36 worlds of already spiritual life and 36 worlds of life still atomic material. The information is entangled as always, as it is in nature, forcing us to have an accurate reason to decipher.

To complete the amount of 72 worlds we had to pursue the 6 points and plus the 3 internal triangles and this exactly because the most evolved worlds are a projection of the worlds of lesser evolution and those of lesser evolution are the past of the world's most evolved so this tangle of information, almost similar to the tangle that forms when the cereal is folded in the confection of the circles. The planets are all interdependent, because those of lesser evolution depend on the planning, in more advanced worlds, for their progress. And in the worlds of higher evolution spirits work to leverage the progress of the world itself and of worlds of lesser evolution. This is why events develop in Atida chronology to the planning of earlier worlds that are monitored by others of much greater progress.

I understand that we are the fruit of evolution and mixing with races from other planets and that the history of our land was originally built as the history of many countries, that is, gradually and with wars and struggles against various obstacles being that gradually civilization was taking form in several regions. The aliens who came here in the past have removed enough of our mineral resources but gradually have been leaving their heritage of knowledge to our organization and survival. That is, they fulfilled their mission to make us evolve but also obtained their material profits in a kind of exchange. They did not come here on a purely humanitarian mission but did their part and a beautiful day were disinterested by our planet or had already another kind of mission and interest ahead because of their degree of evolution achieved. This similar path we must travel when we find the Primitive World (7th), for as well as they have fulfilled a duty to us we have a duty to fulfil it for others with lesser evolution because we are all brothers. In my study of No. 17 "A logical message in a beautiful drawing" is analyzed that the whole Planet School (6th) when it reaches this condition or category contacts necessarily another planet later evolutionary to precisely make this planet its successor in the hierarchy Evolutionary. I have no doubt that there are much more Planets with life in our galaxy than we can even imagine. Life is not the fruit of chance, but of laws that lead everything and all to evolution.

## **E 90) Agriglyph of Base 6:**

[Http://www.lucypringle.co.uk/photos/2012/corley-cropcircle-2012.shtml](http://www.lucypringle.co.uk/photos/2012/corley-cropcircle-2012.shtml)

In this figure in England in Burrow Hill Fort, Rock Lane, Nr Corley. Warwickshire, we have Repeated by 6 times 12 triangles. We have these triangles drawn in two different positions and this is because if we take the three sides of the triangle and multiply by 12 we will have 36 and this equates to 6 sets of 6 planets where there are 18 planets of still physical life and 18 planets of life already only spiritual. If we add each of the amounts of 36 to the 6 "petals" Central we obtain 42, an amount equal to that is placed in each "ring" of the Big "8" of August 2008. In the great "8" the 6 sets of each "ring" are represented with their respective primitive worlds (7th) hence the amount of 42 and not 36. As above we have 6 sets in each range of the "petals" we have a total of 3 large "8" represented. Or once again the amount of 3, 3 worlds that Unite, 3 worlds of similar evolutionary stage that evolve next, 3 sets of 6 or 7 worlds and also now 3 large "8" or 84 planets  $\times 3 = 252$  planets where 144 planets are still life atomic material and 108 of life already only spiritual. If we count, simply the triangles of each range  $(12) + (6)$  "Petals" we get 18 in a reference to the 3 sets of 6 planets. If we multiply 6 "petals" by 4 (sides) we have 24. Now if we add  $24 + 12$  triangles We have again the amount of 36 that is, 6 sets of 6 planets where 12 It would be the representation of the two planets of less evolution of each of the 6 sets respectively The Planets School (6th) and the Denso (5th), it is good to remember again that in the sets with 6 worlds are not counted the primitive planets (7th).

## **E 91) Agriglyph with many different ideas:**

[Http://www.lucypringle.co.uk/photos/2012/etchilhampton2-cropcircle-2012.shtml#pic3](http://www.lucypringle.co.uk/photos/2012/etchilhampton2-cropcircle-2012.shtml#pic3)

In this drawing in Etchilhampton (2) Nr Devizes, Wiltshire in England in July 2012 we have the representation of several independent ideas. In the collar of inner circles, we have 33 circles that would represent the 33 spiritual categories. In the outer collar we have 21 circles that represent the 3 sets of 7 planets that evolve more closely, according to one of the "rings" of the Great "8" of August 2008. We have at the center of the drawing, dividing it into 2 parts a line. Near the opening of the inner collar we have in this line the representation of 3 concentric circles that in my view represent 3 planets of similar category acting together or even 3 sets of 6 or 7 planets that evolve more closely. In this same central line, already inside the inner collar, we have 7 circles, which in my view represent a set of 7 planets, this is a set that already accounts for the discovery of their primitive World (7th) by their Planet Class 6 or school, the same category of the Earth. The Central line over which we are weaving these comments protrudes beyond the outer collar through it and having this other tip plus 4 circles. If we add the 7 circles, lined up in this center line, present in the inner collar + these 4 circles externals we get 11, which for me are a reference to the 11 attributes of the spirit. Informing once again that the planet Class 6 or school, category to which the land belongs, is the last planet of the sets of 6 worlds to know of the existence of the Primitive Planet (7th) and that this is only counted in the sets, thus getting this with 7 planets, when the Planet School (6th) meets the Primitive Planet (7th). That's why there's six-and seven-planet sets representation. If we add up, in the center line, 7 circles, inside the inner ring, + the 3 concentric circles, + the 5 circles not "ensnared" by the outer collar on the inner collar and + the 21 circles of

the outer collar we obtain 36, ie the representation of 6 sets of 6 planets. And in the great "8" of August 2008 we have the representation, in total, in each of its "rings", of 6 sets of 7 worlds each, IE complete sets where the school World (6th) of each of them already discovered the primitive World (7th) of its sets. If we add the 33 circles of the inner collar + the 3 concentric circles, present in the center line, we have again 36 that if added to the other 36 gives us the amount of 72 planets, being that in the large "8" We have the total representation of 84 planets, but as previously placed, 12 sets of 7 planets, sets with their respective primitive planets accounted for.  $84 - 12$  (primitive planets, 1 for each set) = 72 planets. We also have that the end of the outer collar, at its two ends, leaves out of its involvement 7 circles of the inner collar, once again evincing a set of 7 planets. But if we analyze well let's see that the circles out of the involvement of the outer collar are 5. If we add these with the 4 circles from the end of the axis outside the outer collar, we have the amount of 9 that for me represent the 9 planets of already only spiritual life present in 3 sets of 6 or 7 planets. If we add to the 5 circles outside the involvement of the outer collar the 7 circles present in the center line inside the inner collar we obtain 12 in a reference to the 12 worlds of life still material present in 3 sets of 7 planets. If we add the 5 circles outside the involvement of the outer collar + the 3 dark light circles, present in the center line near the opening of the inner collar, we have 8 in a reference to the 8th attribute of the Spirit (logic) or the universal logic. If we take the 7 circles of the inner collar out of the "linkage" of the outer collar + the 7 circles of the center line that are situated inside the inner ring we obtain 14, that if we add to the 3 concentric circles in the center line, located in the opening of the inner collar we obtain 17, which for me is a reference the first 17 spiritual categories that are necessarily reincarnated for learning on the Planets School (6th), and this is also a universal law expressed in the book "Christian Rationalism" 43 edition.

## **E 92) Agriglyph of the spiritual classes and more:**

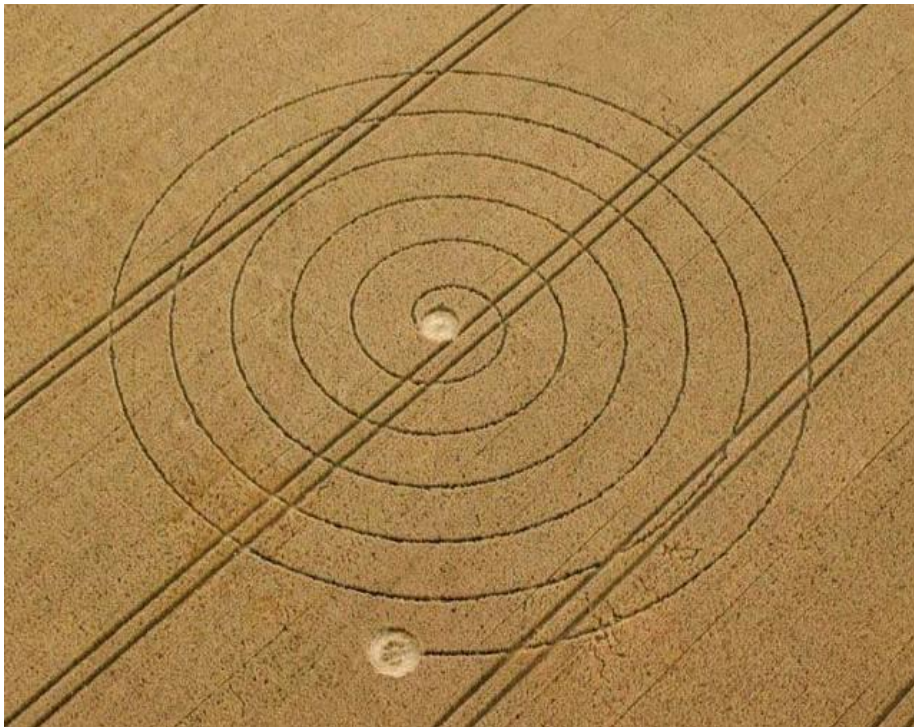

[Http://www.lucypringle.co.uk/photos/2012/avebury-cropcircle-2012.shtml#pic4](http://www.lucypringle.co.uk/photos/2012/avebury-cropcircle-2012.shtml#pic4)

In this drawing in England in the locality of Avebury Stone Circle, Wiltshire observed that there is a more external arc with 14 descending circles + an arc of intermediate circles with 8 descending circles, and more an arc of inner circles with 7 circles also Decreasing, in a total of 29 circles. If we add to these 29 the 3 circles in green that surround the larger and lighter circles of the 3 arches of circles, which are aligned by the same radius and more the large circle to the center of the drawing we obtain 33, in an allusion to the 33 spiritual categories. If we add 33 + 3 small circles that appear on the "tip" of each of the circle arcs we have 36, in a reference to 6 sets of 6 worlds. Now if we add these 36 to the 3 semi circles that contain the arches with the descending circles and plus the 3 figures located in the projection of the lines of the aforementioned arcs, which are aligned in the same radius, we obtain 42 in a clear reference to the 6 sets of 7 planets, this is 6 sets that already account for the encounter of the Primitive Planet (7th) by the World School (6th) of each of them. As we have in the great "8" of August 2008, there are 6 sets of 7 planets each one that evolves more closely. Why the design has this layout is still an unknown to me and this in the circles should be the target of studies of the future generation of scholars of the subject. We also have the presence in the lines that They mark the arches of

descending circles, which exist on the outermost 5 "steps" causing the line to have 5 different thicknesses, in the middle 4 "rungs" and in the innermost 3 "steps" totaling 12 steps. If we decrease 12 of 33, we get 21, in a reference to the 3 sets of 7 planets that evolve more closely. If we take 12 of 29, which is the sum of the three arches of light circles, we get 17, in a reference to the first 17 spiritual categories whose progress is reincarnated necessarily. The amount of 12 is a reference to the 12 planets of still physical life present in the 3 sets of seven planets. If we subtract 3, which is the amount of circle arcs, of 12 we get 9 in a reference to the 9 planets of already spiritual life present in 3 sets of 6 or 7 planets.

## **E 93) Double-acting spirals:**

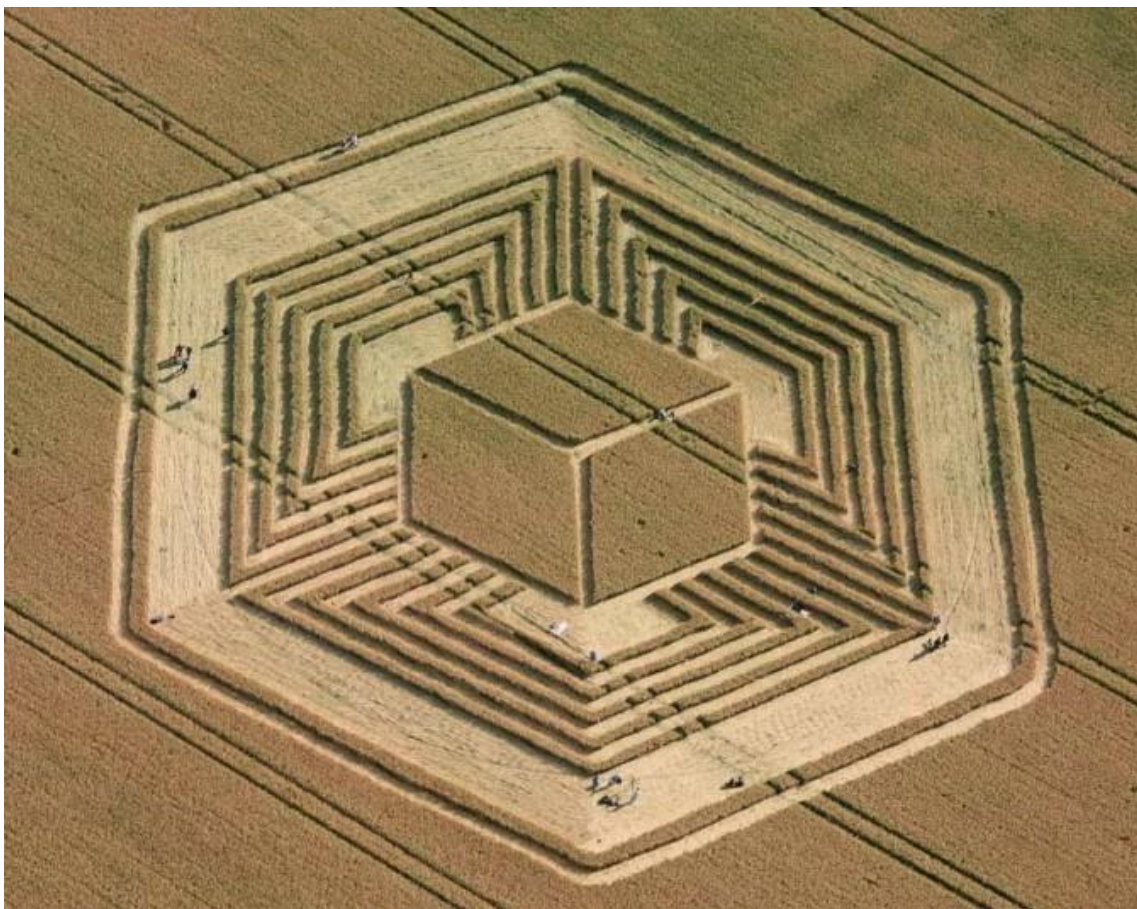

[Http://www.lucypringle.co.uk/photos/2012/wootton-rivers-cropcircle-2012.shtml](http://www.lucypringle.co.uk/photos/2012/wootton-rivers-cropcircle-2012.shtml)

In this drawing In England in the town of Chalk Pit, nr Wootton Rivers, Wiltshire we have a design that shows us exactly the duplicity of the possibility of a set of worlds being made up of 7 or 6 worlds. If she is represented by 7 worlds she already accounts for her primitive World (7th) and then has 4 worlds of material life and 3 lives already spiritual. If it is represented by 6 worlds then it still does not have its primitive world and has 3 worlds of already spiritual life and 3 worlds of still material life, since the Planet School (6th) of this sets still do not know the existence of the Primitive Planet (7th) of this sets. And as I have been studying the planet school is the last planet of the sets to know of the existence of the primitive planet. In the drawing above if we count only the lines between the light circle to the center and the clear circle abroad we have the amount of 7. If we count the actual spirals, or the thicknesses between the lines, in the same direction between the two inner and outer circles, we obtain the amount of 6. We see that the

position of the planet external to the spiral is more evolved than that of the inner planet and that in fact this most evolved planet came from that initial internal position to the spiral, like every planet that has life, and that begins as a primitive planet. Then we realize that we are facing the representation of the evolutionary trajectory of any planet where there is life that begins in a 7th timid position primitive and reaches the condition of the first planet or planet of pure light. Hence, from this first position this super evolved planet resumes a new trajectory with its fluidics structure, thus being the first position in this new condition as well, being now no longer of grandeur but of incipience.

## **E 94) the cube and the Hexagons:**

[Http://www.lucypringle.co.uk/photos/2010/vernham-dean-cropcircle-2010.shtml#pic3](http://www.lucypringle.co.uk/photos/2010/vernham-dean-cropcircle-2010.shtml#pic3)

In this drawing in England, in the locality of Fossebury, nr Vernham Dean, Wiltshire We observe that there is a central cube in perspective, figure that has 6 sides, plus 1 hexagon formed by interleaved lines of cereal folded and intact forming 3 sets of concentric squares, plus 1 hexagon built by a thin perimeter line of intact cereal and 1 more hexagon of cereal folded on the outside of the Drawing. Each set of concentric squares has 20 lines, then  $20 \times 3 = 60$ . We add to this the six sides of the central hub, getting 66. If we add to this amount the total sides of the 3 hexagons (18), that is, including that formed by

the 3 sets of concentric squares, we obtain:  $66 + 18 = 84$ . And, as we know, in the great "8" of August 2008 is represented the amount of 84 planets that evolve together, that is 12 sets of 7 planets, ie 12 sets with their respective primitive worlds. Now if we do the following calculation: The concentric squares are actually formed by 20 clear lines and 20 dark lines, so we would have 40 lines in each one multiplied by 3 = 120, adding to this the 6 sides of the central hub we get 126, which add up to the sides of the 3 Hexagons (18) we obtain 144. And this amount is exactly  $72 \times 2$ , and 72 is exactly  $84 - 12$ , that is, 72 is exactly 12 sets of 6 worlds, i.e. 12 sets without their primitive worlds. So, 144 is the representation of 2 times the number of planets expressed in the great "8" without the 12 primitive worlds accounted for each of the 12 sets of worlds.

## **E 95) 5 Planets + 2 Planets:**

[Http://www.lucypringle.co.uk/photos/2012/cheesefoot-head-cropcircle2-2012.shtml](http://www.lucypringle.co.uk/photos/2012/cheesefoot-head-cropcircle2-2012.shtml)

In this Agriglyph in England in the locality of Cheesefoot Head (2) Nr Winchester, Hampshire in August 2012, we have once again the configuration of what I have been studying, ie we have in the larger part of the drawing 5 concentric circles, being that the doctrine of Christian rationalism in Reports that there are 5 types of planets hierarchically above our type of planet that is school (6th). I also study the planets schools, such as Earth, are the last types of planets in their sets that are aware of the existence of a more primitive planet in the same sets of 7 planets. That is, the Planet School (6th) will find a primitive planet (7th) and so start in this a sets of improvements with views to transform

it into a planet School (6th) so that the hitherto Planet School (6th) could become a dense planet (5th) and thus the sets with 7 types of planets Become a sets again with 6 types of planets, until the time this new Planet School (6th) is already able to find a new primitive planet (7th) and so on. So we see above 5 integrated planets and 2 planets outside of this "integration" and this exactly why the Earth, as I have already put it, a planet school class 6, nor the primitive Planet Class 7, yet know its condition of participant of a sets of 7 worlds, aimed at becoming U Ma sets with 6 worlds when the world of Light Pure This sets totally lose its crust of atomic matter and stay only in the form fluidics joining the domains of Universal intelligence, then ascending to the condition of the World of Pure Light (1st), the, until then, Diaphanous world (2nd) because the evolution of the planets is chain, type domino effect. On my blog There is the study 36 that shows us a message like this Agriglyph. Note the representation of the evolutionary difference between the 5 most evolved planets and the other 2 that are the Earth (6th) and the Primitive (7th) that are represented here in a line of tangency in relation to concentric circles. The circles are concentric because the most evolved planets encompass those of lesser evolution, that is, the circles only represent the phases of the planets: primitive phase, phase school, dense phase. etc. And after the Spirit tours evolving on 7 types of planets it finally enters the realms of Universal intelligence that can be considered the eighth abode of the spirit, hence assume why Luiz de Mattos has been intuited to place as the logic the 8th attribute of the spirit, for it is in this 8th place that reigns absolute logic. So also, the great "8" of August 2008, where we are told the existence of 84 planets that evolve more closely, giving us the idea of the logic of the functioning of planetary evolution in the galaxies.

## **E 72) 17 spiritual Classes and 18 worlds:**

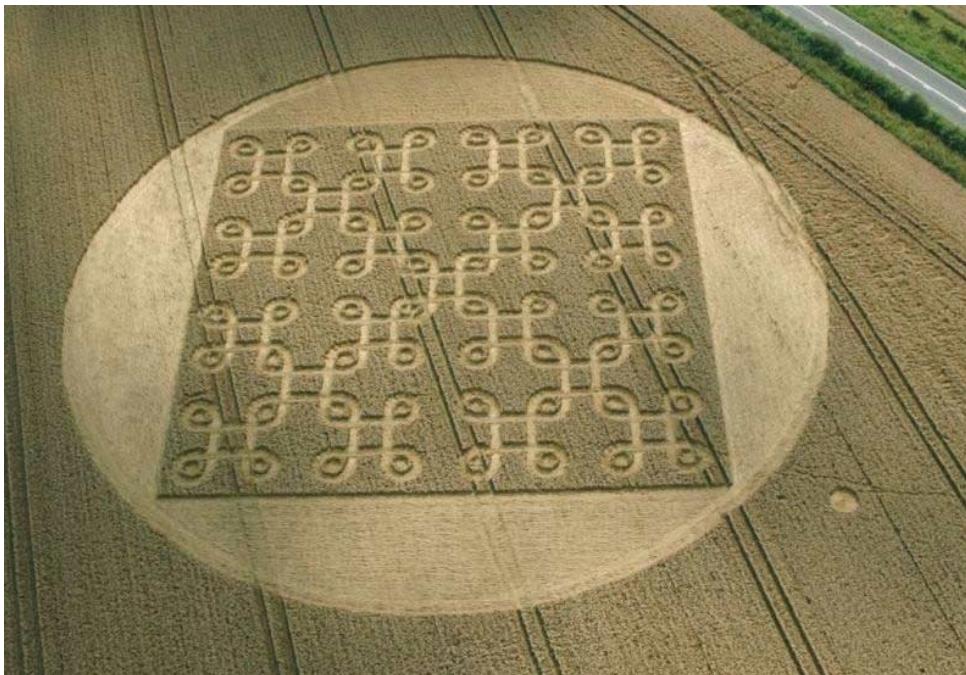

[Http://www.lucypringle.co.uk/photos/2007/uk2007bh.shtml](http://www.lucypringle.co.uk/photos/2007/uk2007bh.shtml)

In the design above in England at Wilton, Wiltshire in July of 2007 we observed the presence of 8 circles + 1 Central circle, in a total of 9 circles. Circling these there are + 8 "buds" that add up to the 9 circles we get 17. These 17 for me represent the first 17 spiritual classes that are necessarily reincarnated to achieve their evolution in the School Worlds (6th). If we add to the 17 the circle that encompasses the entire drawing we have 18 that would represent 3 sets of 6 planets, or 3 worlds Class 6, 1 of each set, which according to my studies must work together on the primitive planet to be discovered also by the Earth.

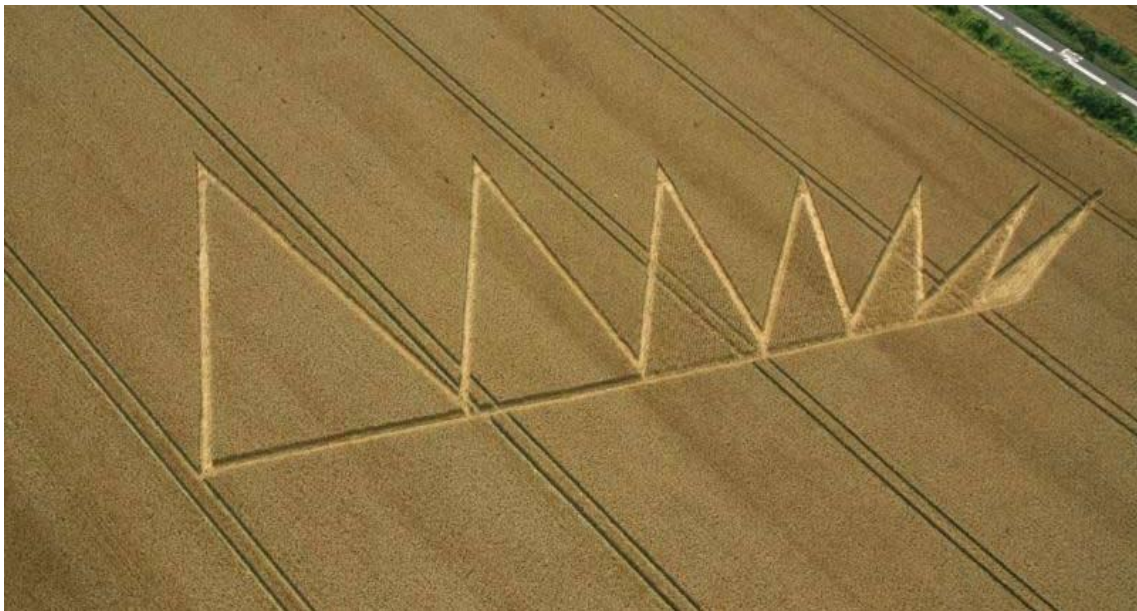

## **E 96) 12 sets of 6 planets:**

[Http://www.lucypringle.co.uk/photos/2012/cheesefoot-head-cropcircle1-2012.shtml#pic4](http://www.lucypringle.co.uk/photos/2012/cheesefoot-head-cropcircle1-2012.shtml#pic4)

Agriglyph in England in August 2012 in the locality of Cheesefoot Head (1) Nr Winchester, Hampshire. Are represented 64 interconnected circles, which shows us the link between worlds, more precisely those that evolve closer, as are the 84 represented in the great "8" of August 2008. Here we have then 64 planets, but if we add the 4 sides of the square and plus the 4 "hubcaps" We have a total of 72 planets, i.e. 6 sets of 6 planets, or 6 sets where the existence of the 7th planet is not yet accounted for each set. If each of the 12 sets was already with its primitive Planet (7th) The amount would be 84 planets ( $72 + 12 = 84$ ), or exactly the same number of planets present in the big "8" of August 2008. If we add to the 64 the small circle outside the main body of the drawing we obtain 65, from where we deduce that  $6 + 5 = 11$ , in a reference to the 11 attributes of the spirit. That is, on any planet where there is intelligent life, the spirits are developing their 11 attributes.

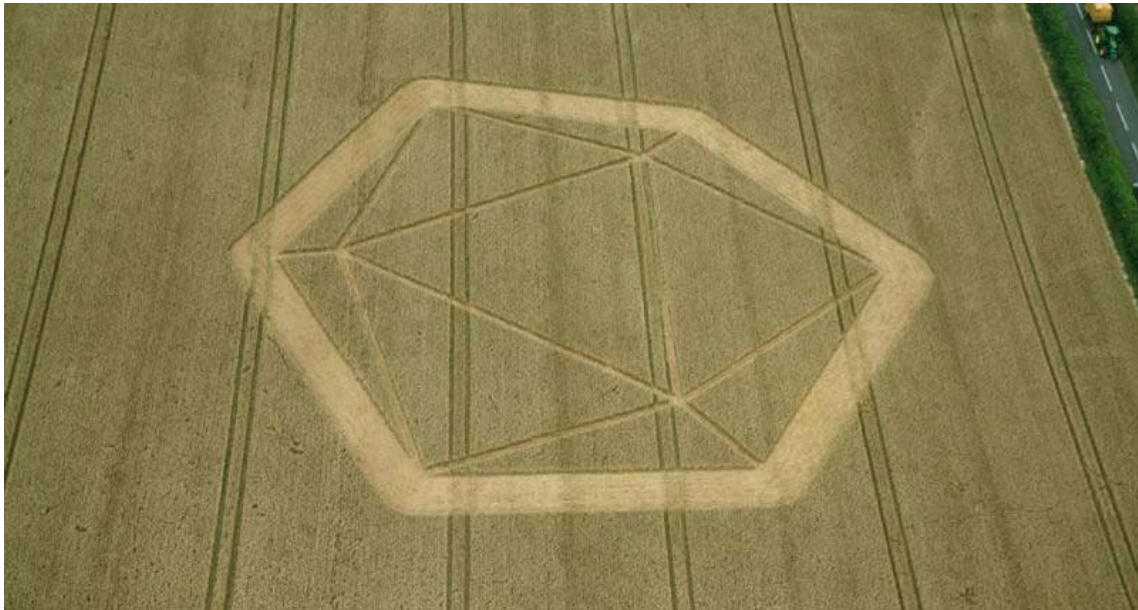

## **E 97) 3 sets of 7 planets:**

[Http://www.lucypringle.co.uk/photos/2012/longwood-road-cropcircle-2012.shtml](http://www.lucypringle.co.uk/photos/2012/longwood-road-cropcircle-2012.shtml)

Drawing in England in the locality of Longwood Road, nr Owslebury, Hampshire. As we can see there are 7 triangles and each represents a world in one of the 7 evolutionary phases, since the smaller triangle represents the world of lesser evolution, that is, the Primitive Planet (7th) and the larger triangle the most evolved, ie the planet of Light Pure (1st). As I have been studying the sets, now 6 Ora of 7 planets, evolve into other sets, i.e. the sets of planets evolve, more closely, in groups of 3 sets. So, since the triangles have 3 sides it is easy to infer that in this drawing was once again represented 3 sets of 7 planets i.e. 21 planets that evolve more closely hitched, as is represented in each of the "hoops" of the Great "8" of August 2008, 21 circles. So, in this drawing we have that each of the sides of the triangles represents a type of planet in a different set. They are 3 planets of the same evolutionary category of 3 different sets, but, for example the latest one may be just 2000 years in a category, the middle one may already be 3000 years in this category and the earliest may already be a few 4000 years in this category and already be changing category.

## **E 98) 36 lines and the 6 sets of worlds:**

[Http://www.lucypringle.co.uk/photos/2012/owslebury-cropcircle-2012.shtml](http://www.lucypringle.co.uk/photos/2012/owslebury-cropcircle-2012.shtml)

In this drawing in England in Owslebury, Winchester nr, HampsHire In August Of 2012 We have, if we count each side of the internal figures as being a line, the amount of 30 lines. But if we add to these lines the amount of 6 lines of the figure that surrounds the drawing, we get 36 lines. In the great "8" of August 2008 we have in each "ring" the representation of 42 worlds, or 6 sets of 7 worlds, IE sets already with their Primitive worlds (7th) accounted for, this is discovered by their planets School (6th). So above we have 6 sets of 6 worlds, where the respective primitive planet is missing (7th) in each of them. The 6 external lines represent the 6 worlds of Pure Light (1st) which are the most evolved of each of these 6 sets and which command them. All this work is done to, by shuffling the sums, make human beings think and reach the true conclusion. If we prefer we can also make  $10 \text{ figures} \times 3 \text{ sides} = 30$  and add + 6 sides of the hexagon that limited the figure.

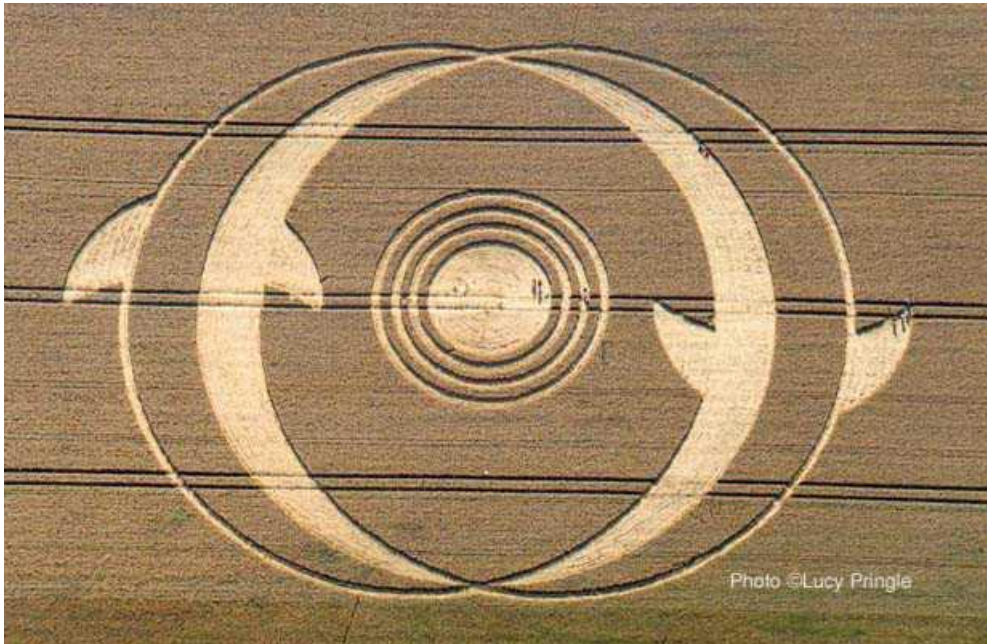

## **E 99) sets of 6 and 7 planets:**

[Http://www.lucypringle.co.uk/photos/2012/fyfield-cropcircle-2012.shtml#pic2](http://www.lucypringle.co.uk/photos/2012/fyfield-cropcircle-2012.shtml#pic2)

Crop Circle in England in August 2012 in Devil's Den, nr Fyfield, Wiltshire. There are 10 indentations and in 4 of them there are 7-line representation,  $7 \times 4 = 28$ . In one of the recesses there are 8 lines, then:  $8 + 28 = 36$ , ie we have AI once again the representation of 6 sets of 6 planets. But if we add to these 36 the 3-clear line of the "frame" that limited the figure + the 3 dark lines that form the other half of the "frame", we have 42, in a reference to the 42 planets or 6 sets of 7 planets, as represented in each of the "rings" of the Big "8" of a I like 2008. If we add to the 42, the 5 squares of the recesses that have no lines we have 47, from where we can take that  $4 + 7 = 11$  that is, we have a reference to the 11 attributes of the spirit. Once again it is demonstrated that the sets of planets are now with 6 now with 7 planets, having in this case the presence of the Primitive Planet (7th) detected by the respective Planet School (6th) of each set. If we add only the lines of the 3 recesses to the right of the recess that has 8 lines, we have  $3 \times 7 = 21$ , that is, a reference to the 3 sets of 7 planets that evolve more closely hitched. Remembering that the Primitive Planet (7th) always exists in the sets of 6 planets, but it is only counted in them from the moment the Planet School (6th) of the sets finds this planet in its sets.

## **E 100) Dolphins:**

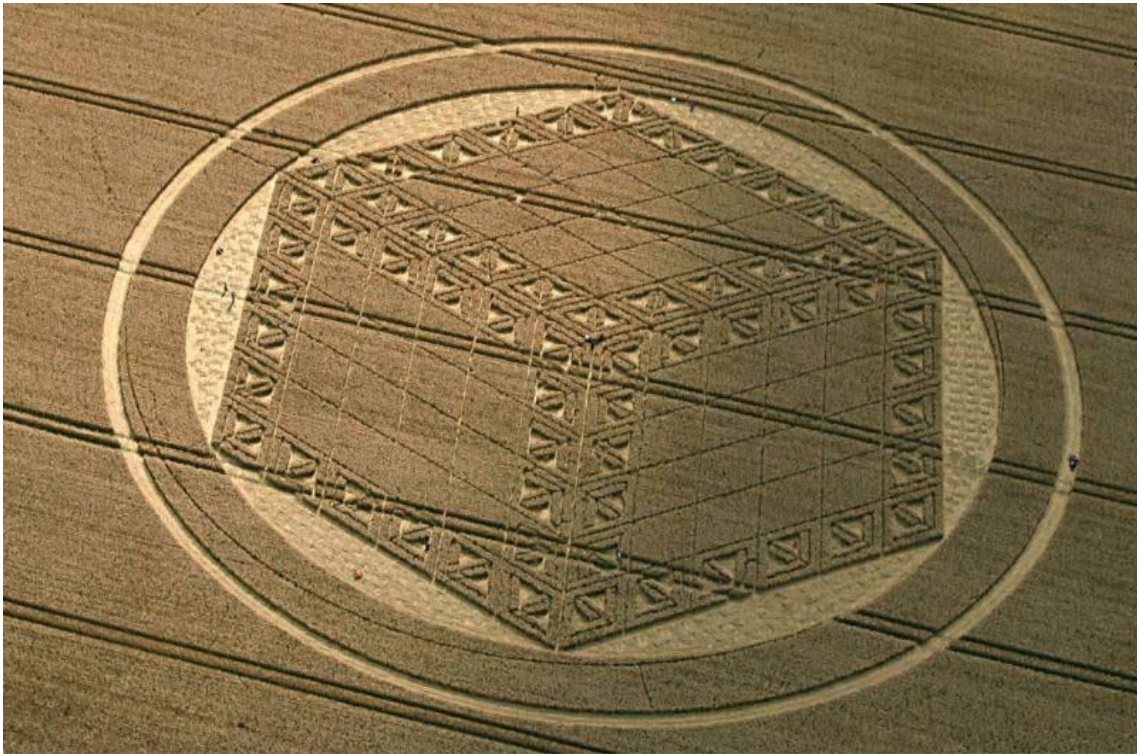

[Http://www.lucypringle.co.uk/photos/2002/uk2002df.shtml](http://www.lucypringle.co.uk/photos/2002/uk2002df.shtml)

Agriglyph in England in East Field – Alton Barnes, Wiltshire in August 2002. We can observe that there are, in the center, 7 concentric circles, which to me are a reference to the 7 types of planets that exist in our universe, being 3 types of life already only spiritual and 4 kinds of life still material. If we add  $7 + 4$  "fins" we get 11 in a reference to the 11 attributes of the spirit. As the drawing is symmetrical, we have on one side 2 "Silhouettes" of dolphin, 1 clear and 1 dark, and one more clear line that externally circumvents these "silhouettes", and as are two sides equal we have then  $3 \times 2 = 6$ . If we add this 6 to the 11 we get 17, in a reference to the first 17 spiritual categories, which are necessarily reincarnated for learning, on the Planets School (6th). We also note that there is a dark and larger concentric circle, which encompasses the smallest 7 to the center. If we add  $17 + 1$  We have 18 in a reference to 3 sets of 6 planets, i.e. sets that evolve nearer and in which the Planets School (6th) have not yet contacted with their respective primitive planets (7th). If we add 8 central circles + 6 we get 14, in a reference to the 2 sets of seven planets that evolve closer together. If we add 8 central circles + 4 "fins" we get 12 in a reference to the 12 planets of still physical life that exist in 3 sets of 7 planets. If we add 7 central circles + 2 "fins" we obtain 9 in a reference to the 9 planets of life already only spiritual present in 3 sets of 6 or 7 planets. In life, each end of cycle is only the beginning of a new cycle, just as it shows us the great "8" of August 8, 2008.

## **E 101) The 576 planets alive?**

[Http://www.lucypringle.co.uk/photos/2012/hackpen-hill-cropcircle2-2012.shtml#pic7](http://www.lucypringle.co.uk/photos/2012/hackpen-hill-cropcircle2-2012.shtml#pic7)

Agriglyph in England in Hackpen Hill (2) Nr Broad Hinton, Wiltshire in August 2012. In this drawing we have a cube in perspective where we show 3 sides of the 6 that make up the cube. We have on each of the 3 sides shown 16 frames and circling these we have 20 frames where they are represented 4 strokes inside. So, we have  $20 \times 4 = 80$  and adding  $+ 16$  we get 96, which if multiplied by 6 (sides) we obtain 576. As we know in the great "8" of August 2008 are represented 84 planets, this is 12 sets of 7 planets or 12 sets already with their primitive planets (7th). If we do not account for the respective primitive planets of each sets we have  $84 - 12 = 72$  planets. Now if we divide 576 by 72 We get 8, that is, we have then represented in this drawing the amount of 576 planets with life, being 288 with still life material and 288 with already spiritual life, or 8 large "8", or still 96 sets of 6 worlds, ie, sets that still do not account for the meeting of their World School (6th) with the Primitive World (7th). We know that the hexadecimal base, used in computing, consists of counting on a base 16. We realize that we have on each side 96 parts and that every set of worlds in this case has 6 worlds. If we divide 96 by 16, we get six. That is, with each quantity of 16 parts we have the representation of a type of planet of the sets, being that in the center of each side we have 16 squares which refers us to think that there in the center is represented the world of lesser Evolution or school (6th) because it is here of sets with Six kinds of worlds. This is the planet school as the earth being surrounded by the others that add up to 80, from where we deduce that  $8 + 0 = 8$  and this number is a reference to universal logic. We also observed that  $1 + 6$  in the center, gives us 7, Then it would be a reference to which the world of lesser evolution will then be the Primitive

Planet (7th), when the planet Earth or school was added to the presence of another planet. If we multiply 96 (1 side) by 3 we get 288, and if we divide by 16 (which in the case is a unit or world) we get 18 which is equivalent to 3 sets of 6 worlds i.e. the 3 sets that evolve more closely, represented by the 3 visible sides of the cube. And since we have six sides, we can also say that the cube represents six sets of six worlds. If we add  $(6 \times 6) + 6$  (light caps) We obtain 42 or 6 sets of 7 worlds present in each "ring" of the Big "8". If we add  $2 + 8 + 8 = 18$ ! If we add  $5 + 7 + 6 = 18$ ! Other aspects of the figure: 1) 3 sides + 6 Clear caps + 1 thick dark circle and + 1 thin light circle = 11 attributes of the spirit. 2) 3 sides + 6 Clear hubcaps = 9 worlds of already only spiritual life present in 3 sets of 6 or 7 planets. 3) 6 sides of the cube + 6 Clear Hubcaps = 12 planets of life still material present in 3 sets of 7 planets. 4) 3 Sides of the cube + 1 clear circle of the Hubcaps + 1 Dark thick circle + 1 thin light circle = 6 Worlds of a sets without its primitive planet (7). 5) 6 Sides of the Cube + 6 light caps + 1 thick dark circle + 1 light thin circle = 14, i.e. 2 sets of 7 planets that evolve more closely.

## **E 102) Star again with 84 planets:**

[Http://www.cropcircleconnector.com/inter2012/germany/Andechs2012a.html](http://www.cropcircleconnector.com/inter2012/germany/Andechs2012a.html)

In this design built in Andechs Abbey, Bayern, Bavaria, in Germany, is again the same number of planets that are represented in the great "8" of August 2008. In the great "8" We have 12 sets of 7 types of worlds or are worlds with intelligent life classified in 7 distinct positions of evolution. The Earth is a planet that occupies the school level or 6th level, being only more evolved than the Class 7 or primitive planets. In this drawing you

will notice three larger dark stripes that would represent the 3 worlds of the greatest evolution of the sets of 7 worlds: Planet of Light Pure (1st), Planet Diaphanous (2nd) and Planet Intermediary (3), these are the planets that already possess the spiritual life on their surfaces and no longer the atomic material life, i.e. they are dwellings of spirits and no more of individuals with physical bodies. The four clear stripes would represent the four planets of the smallest evolution of the seven-planet sets. Since these planets still have physical life as we know it here on Earth. It would be the Planets: primitive (7th), School (6th), dense (4th) and opaque (5). We still have that the light stripe of lower volume flows with the stripe Clear that owns the Volume Higher subsequent to it And this I interpret as the world of Lesser Evolution (7th) be in contact with the world of evolution just above there is in the sets to which it belongs, that is, the Earth (6th) must find a world less evolved than it, a primitive world (7th) and interact with this world, just as alien beings have interacted with human beings in the past of the Earth. This kind of contact is a universal law, according to understand, and was exposed in the great formation of Milk Hill in August of 2001 Which is analyzed in my 17 study.

## **E 103) drawing in Wiltshire UK.**

[Http://www.cropcircleconnector.com/2013/eastfield/eastfield2013a.html](http://www.cropcircleconnector.com/2013/eastfield/eastfield2013a.html).

In this drawing in East Field, nr Alton priors, Wiltshire In June 2013, we notice that in the center there are 8 Triangles and 1 square A sub-total of 9 elements. We also see that there are circling these 9 elements 1 "Half-moon" smaller and another "half-moon" larger being that these two "half-moons" Form 4 "quadrants" demarcated by the 4 lines coming out of the 8 central triangles. We also have 4 circles at the ends of these lines. If we add 9 (central elements) + 2 (half-Moons) + 4 (quadrants) + 4 (external circles) we get 19,

which according to my studies Indicates the existence of 3 sets of 6 planets, hierarchically allocated sub totaling 18 planets + 1 Primitive Planet (7), which belongs to one of these 3 sets, thus forming the sum of 19 planets. The nine planets in the center are the three most evolved of each set, those who already have life in the spiritual form alone. As for the 10 peripheral planets are the 3 of life still material in each of the 3 sets and + a primitive planet. If we do the sum above with 19 and now count instead of 2 "half-moons" 4 arc segments, because the two "half-moons" are cut in half by a line, then we have the following sum:  $19 - 2 \text{ (half-moons)} = 17$ , and adding to the 17 the 4 segments of arc we have 21, that is, the representation of 3 sets of 7 Planets, or 3 sets each already with its primitive planet (7th), making the 3 Sets with 3 planets of life already spiritual and 4 planets still material life. The primitive planet appears in the sets so that there can be the joint progress of the other worlds. When the Primitive Planet (7th) ascends to the category of Planet School (6th) The most evolved planet of the sets called The Planet of Light Pure (1st) enters the space of Universal Intelligence And the planet that comes right behind him, ie the planet Diaphanous (2nd) assumes then the first position in the sets turning into Planet of Light Pure (1st). Back to the drawing we also have to the amount of 21 Add + The 4 strokes that connect the tips of the "Half-moons" at 2 external small Circles E + 2 Traces That protrude from the internal triangles for the Centre of The 2 "Half-moons" and + the 2 strokes that link the center of the 2 "half-moons" To the 2 small circles external. So we have  $21 + 8 = 29$ . Of this amount we can take that  $2 + 9 = 11$ , that is, a reference to the 11 attributes of the spirit that he has to develop reincarnating in a long process of learning. We can also deduce That  $9 - 2 = 7$ , which to me means a reference to the Primitive Planet (7th) which at this moment I believe is highlighted because the Earth will find a planet in which life is still incipient. We can still put that: in the center we have  $8 \text{ triangles} \times 3 \text{ sides} = 24$ , although we have common sides to the triangles which would not give the sum of 24, but we have to remember that these triangles represent worlds and these have their physical limits defined in space. And if we add the amount of 24 to the sum of the surrounding elements that are: 4 quadrants + 2 "half-moons" + 4-line segments at the end of the "half-moons" + 4 segments straight right to the center of the "half-moons" + 4 small outer circles we have 18 elements, so we have  $24 + 18 = 42$ , which is the same number of planets represented in each of the rings of the Great August 8, 2008. That is, exercise walk our analytical imagination Deductive we get a result that aligns with our studies. So, we have that in 6 sets of 7 planets there are 18 planets (3 in each sets) with already only spiritual life and 24 Planets (4 in each sets) with still material life. In this case the more internal planets are the smallest Evolution because they are surrounded by the most evolved that obviously has a greater field of action.

I am Carlos Alberto Aires Yates Natural of the city of Pelotas in the state of Rio Grande do Sul-Brazil, born in 18/03/1958. I came with my family to Porto Alegre-RS in 1965. I was in high school at Julio de Castilhos State College and the Parobé Technical College. I have been a practitioner of Christian rationalism since May of 1994 Although I know the doctrine from 1963 through my mother. I am a technician in mechanics and currently, as a public servant, I work at the Institute of Physics of the Federal University of Rio

Grande do Sul (UFRGS). My first contact with the circles was in 1995 where I saw in a photo 3 concentric circles, and then went to study them in more depth in August 2008.

Porto Alegre-Brazil, August 2012

## **E 104) again in Italy:**

[Http://www.cropcircleconnector.com/2013/CavaManara/CavaManara2013a.html](http://www.cropcircleconnector.com/2013/CavaManara/CavaManara2013a.html).

This Agroglyph arose In Italy Between Cava Manaa and Bressana (Piedimont) in June 2013. It was registered by the Aero Vis teamiOn. Note that it has 3 larger circles where predomina the clear of the cereal folded and 1 Circle profile, also great, In the dark where the cereal is intact. We also have that there are + 2 small dark circles. We also noticed the presence within 2 of the larger circles, of 6 arcThe Dark Ones. We then have 12 distinct parts that in my view represent the 12 planets of life still material (4 for each of the 3 sets). We also have 9 "dark" parts that They would represent the 9 planets of life already only spiritual (3 for each sets), note that the sum of these first two analyses is 21, IE 3 Complete sets with 7 planets each. In another way to see the design we have 3 large circles in light + 1 large circle profile in dark(which in my view represents a planet at the beginning of evolution or is a Primitive Planet (7th)), In a total of 4 circles. We also have 2 small circles in dark and more projection of the idea of a small circle in "light-dark" (Between the 2 small and dark circles) , in addition to these sums we have 7 i.e. 1 Sets complete with 7 types of worlds, the three worlds of the greatest evolution are, in this drawing, in smaller size as if the criterion used in their representations were not their evolution but their materiality, That in the four worlds of lesser evolution is greater than in the three worlds of greater evolution. We can also consider that the worlds are so

represented to demonstrate their distances Both physical and evolutionary in Relation to the planet Earth, which to The worlds of lesser evolution is less than For the most Evolution, in other words, the four of the smallest evolution would be closer to each other and distant from the group of the three most evolved.

## **E 105) The 11 attributes of the Spirit:**

[Http://www.cropcircleconnector.com/2013/Emilia/Emilia2013a.html](http://www.cropcircleconnector.com/2013/Emilia/Emilia2013a.html)

Agroglyph found in Italy in the region of finale Emilia (Modena) in June 2013. In this drawing We have the representation of 10 circles and + 2 halves of circle that if added we would have the amount of 12 in a reference to the 12 planets of life still material present in 3 sets of 7 planets that evolve more closely hitched. But if we count the parts as being divided into 9 circles + 2 halves we have the Sum of 11 parts, which to me is a reference to the 11 attributes of the spirit. The planets of life still material that are primitive (7th), School (6th), dense (5) and opaque (4) That Are the planets where the spirits belonging to the 17th spiritual category come to develop their first 11 attributes. Now look how interesting: The 8 clear circles are aligned and with a division well into the center, thus giving the idea that we have 16 halves that add the two larger halves within the light circle form 18 parts And if we add more the larger and clear circle that involves the two halves s largest we have the sum of 19, again a reference to 3 sets of 6 planets and + 1 primitive planet. Another idea that this drawing passes us is that having 16 parts, ie, The 8 broken circles in the middle, the amount of 16 we can take the following data:  $1 + 6 = 7$  in a reference to both the 7th Planet and a complete sets of 7 planets. In another version we have to  $6 - 1 = 5$  or, A reference to the fifth planet or dense planet or materialized Which is the next evolutionary classification to which the earth should also ascend with the work

that will take effect on the primitive planet that should discover and achieve with manned voyages.

## **E 106) in Tank Latina Italy:**

[Http://www.cropcircleconnector.com/2013/Cisterna/Cisterna2013a.html](http://www.cropcircleconnector.com/2013/Cisterna/Cisterna2013a.html) Agroglyph found in the Latin cistern region in Italy in June 2013. As we see it consists externally of 20 tips and + 20 concave parts. Internally we have two clear circles and + 2 dark circles. Initially we have  $20 + 20 = 40$  and this amount we can say that represents 33 spiritual classes and + 7 types of planets. If we add  $40 + 2 = 42$ , that is, the same amount of planets from each of the big "8" rings of August 2008 that represent 6 sets of 7 Types of worlds. If we do  $40 + 4 = 44$ , where we get that  $4 + 4 = 8$  in a reference to universal logic. If we do  $40 - 2 = 38$ , where we get that  $3 + 8 = 11$  in a Reference to the 11 attributes of the spirit. If we do  $40 - 4 = 36$ , in a reference to 6 sets of six planets each, that is, 6 sets without their respective primitive planets. If we add  $3 + 6 = 9$  in a reference to the nine planets of life already someand spiritual Gifts in the 3 Sets with 6 planets as in 3 Seven-Planet sets. adding  $20 + 4 = 24$  which is the amount of life planets still material present in the 6 sets of 7 planets. If we calculate  $20 - 2 = 18$ , we get the amount of already spiritual life planets present in 6 sets of 6 or 7 planets, or 3 sets of 6 planets without the presence of the primitive world in each of them. If we make  $36 - 24 = 12$ , in a reference to the 12 planets of still physical life present in 3 sets of 7 planets, which as is already known are the 3 sets that evolve more closely hitched. By adding  $12 + 9 = 21$  We get the amount that expresses 3 sets of 7 types of planets. If we add  $8 + 9 = 17$  We obtain a reference to the 17th spiritual category which is the last category where the spirit reincarnated on the planets of life still physical for learning. When we effect  $11 + 8 = 19$  we find an allusion to 3 sets of 6 types of planets where one of them already has the discovery of the primitive world by the respective school planet. That is, no use of calculating machine, no whiz

formulas simply using spiritualistic knowledge. Currently (2013) I am well-fought and discredited by these theories regarding the evolution of the planets and the existence of 7 or 6 types of planets. The people of the doctrine do not agree with my studies and the people of Ufology disagree with the association I do between circles and Christian rationalism. But my conviction is unwavering from the very beginning of my studies In August 2008 and often cost To believe that so well-informed people refute what is clear to me as the light of the sun.

## **E 107) 7 Circles in Yatesbury England:**

[Http://www.cropcircleconnector.com/2013/yatesbury/yatesbury2013a.html](http://www.cropcircleconnector.com/2013/yatesbury/yatesbury2013a.html) In this drawing In the locality Yatesbury, nr Calne, Wiltshire In June 2013 We can clearly see three central circles and + 4 circles in its periphery. The 3 circles Bigger and Would represent the worlds: from Pure Light (1st), diaphanous (2) and Intermediate (3). The peripheral circles would be the worlds: Opaque (4th), dense (5th), School (6th) and Primitive (7th). These 7 types of planets represent a complete sets. We remember that in the great "8" of August 2008 were represented 12 sets coMpletas Totaling 84 planets in their 2 "rings". We also remember that a sets of planets It is only complete when the school World (6th), the same classification of the Earth, finds the Primitive World (7th) later than our planet, POIs the planet Earth until then is The planet of the smallest evolution of the six-planet sets. On the other hand we can activate our imagination Analytical Deductive and perform some "whiz" calculations such as: 5 (smaller circles) + 3 (large circles) = 8, in a reference to universal logic. If the amount of 8 adds + 1 (center circle that intersection The whole of the central circles and the whole of the small circles, we obtain 9, in a reference to the 9 planets of already spiritual life present in 3 sets of 6 or 7 planets. If we add 9 + 3 (core circles) we get 12 in a reference to the 12 worlds of still physical life present in 3 sets of 7 planets. If we add 12 + 9 = 21, that is, It represents 3 complete sets of seven planets. If we perform 21 - 4 (periphery circles) = 17 in a reference to the 17th spiritual category. If we calculate 21 - 3 = 18 We get the amount for 3 sets of 6 types of worlds. If we calculate 17 - 6 (Clear circles) = 11, in an allusion to

the 11 attributes of the spirit. If we make  $18 + 1 =$  We get 19 in a reference to 3 sets of 6 planets where one of them already has its primitive world integrated, this is the RespeCtivo Primitive World (7th) has already been discovered by the Planet School (6th) of one of these 3 sets. If we make  $4 - 1 = 3$  or an allusion to the planetary hierarchical organization where the worlds evolve linked to two other worlds of equal evolutionary category but of 2 different sets, as it is placed in the great "8" of August 2008.

## **E 108) England June 2013:**

[Http://www.lucypringle.co.uk/photos/2013/milk-hill-cropcircle2106-2013.shtml#pic5](http://www.lucypringle.co.uk/photos/2013/milk-hill-cropcircle2106-2013.shtml#pic5) In this drawing on Milk Hill, in this first phase, We observe the existence of 6 irregularly-shaped arc segments around a large, more central and regular circle. We see that there is also the possibility of counting as 7 the segments of the circle because the more inside of them presents a pass in itself as if it were a spiral. Then we would have represented six types of planets and with the added reading of one more planet we would have the presence of the primitive planet setting up a complete sets with 7 kinds of worlds. This "spiral" that shows us the 6th and 7th Planet indicates the evolutionary proximity that exists between the Earth and the primitive Planet of the sets to which it belongs. In other words, we are the evolution of a primitive planet and we will have responsibilities regarding the 7th Planet we will discover. If we add to the 6 irregular circles the 5 circles. The most central and Regulars we have 11 in a reference to the 11 attributes of the spirit. If we add the configuration of 7 irregular circles + The 5 central circles we have 12 in a reference to the 12 planets of still physical life present in 3 sets of 7 planets. If we add the configuration of 6 irregular circles + 3 clear Central Circles we obtain 9, in a reference to the 9 worlds of life already only spiritual present in the 3 sets of 6 or 7 planets. If we add the configuration of 6 irregular circles + 2 green circles we get 8 in an allusion to universal logic.

In this second phase was done by the builders of circles a reuse of the previous design which FHi modified. We have it 4 triangles, IE ( $4 \times 3 \text{ sides} = 12$ ). We also have + 8 small triangles, ie, ( $8 \times 3 \text{ sides} = 24$ ). If we add  $12 + 24 = 36$  in an allusion to 6 sets of 6 types of worlds where 18 worlds are of life already only spiritual and the other 18 of life still dense material As on Earth. If we add to the 36 the large Outer Light circle (1) + 2 green halves + 1 center and + 2 clear strokes that depart from the center until The outer light circle has a total of 42 characters that would represent the 42 worlds present in 6 sets of 7 types of planets As presented to us in the great "8" of August 2008 In each of his "rings". On 42 planets We have 24 life still material Dense (atomic) e 18th Life already spiritual.

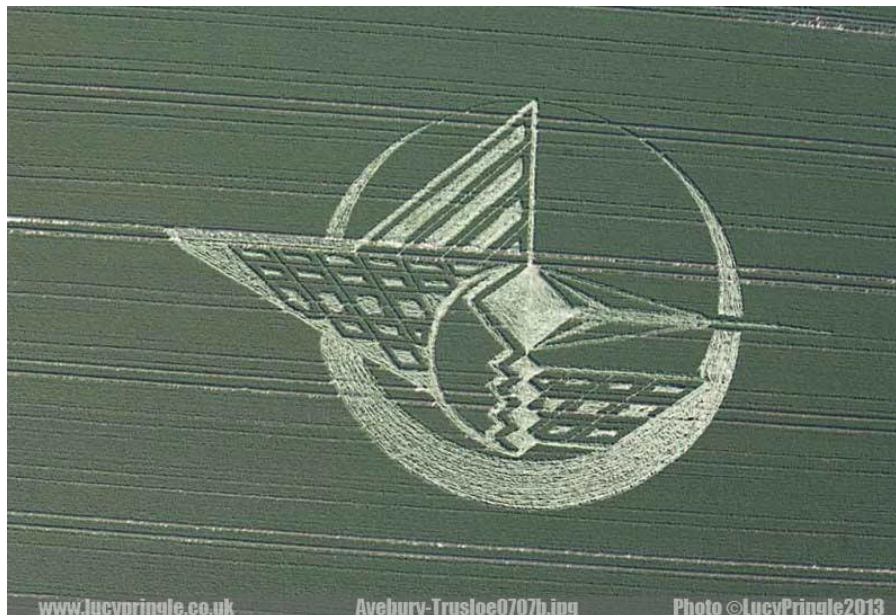

## **E 109) 2013 july In Switzerland:**

[Http://www.cropcircleconnector.com/2013/Rheinau/Rheinau2013a.html](http://www.cropcircleconnector.com/2013/Rheinau/Rheinau2013a.html) In this drawing in July in Switzerland near Zurich we have 3 elements in the form of a delta wing

consisting of 2 circles, there are also 3 rounded points and + 3 concave pieces. There are also 6 "pockets" in folded cereal. If we add the above items we have 18 that for me is a reference to 3 sets of 6 types of worlds. But if we join these 18 the central circle, which forms already junction of the three concave pieces, we have 19 and there we have a reference 3 sets with 6 types of worlds where one of these sets already accounts their primitive world respective, ie the World School (6th) of the sets already knows the Primitive World (7th) that belongs to the sets. If we count 3 sides for the Deltas wings ( $3 \times 3 = 9$ ) and add the 4 sides of the concave parts ( $4 \times 3 = 12$ ), we have in the amount of 9 1 reference to the 9 planets of already only spiritual life in 3 Sets of 6 or 7 planets. And in the amount of 12 1 reference to the 12 planets of still physical life present in 3 sets of 7 types of planets. If we add  $12 + 9 + (3 \times 3 \text{ sides of the rounded ends})$  we get 30 that if added to the 6 light pockets give us a reference to 36 planets or 6 sets of 6 types of planets, this is sets where still none of them contacted their primitive world. In the great "8" of August 2008 are represented 6 sets of 7 types of worlds, or 42 worlds where each of the 6 sets has already found its respective primitive world. The planets evolve in domino or chain effect, so when the most evolved planet in the sets is dematerializing and entering the universe of logic AbsoluTa of Universal Intelligence Another planet has to take over the place of planet School, for what was in this position evolved, And who assumes is the until So Primitive planet, Making with this rise the sets again with 6 types of planets.

## **E 110) Avebury Trusloe UK July 2013:**

<http://www.lucypringle.co.uk/photos/2013/avebury-trusloe-cropcircle0707-2013.shtml#pic3> Here's The one Agroglyph of July 2013 in Avebury Trusloe near Avebury in Wiltshire England.

We don't have that in the quadrant below the right 9 elements. In the center line of the circle at the bottom + 5 elements. In the lower quadrant to the left there are + 19 elements.

In the upper quadrant to the left + 4 elements. Protruding from the square to the center to the right there are + 4 tapered triangles.

19 is the number of 3 sets of 6 worlds each where one of these already has its primitive world (7th)

5 is the number of types of world hierarchically superior to planet Earth, so we are the 6th planet.

$9 + 5 = 14$ , ie, The two complete sets of seven planets that evolve more closely.

$19 + 14 + 4 = 37$  ie, 6 Sets of 6 types of worlds, where one of these sets already has its primitive world.

$19 + 14 = 33$  in a reference the 33 spiritual categories that evolve in our universe.

If we add  $37 + 4$  (Tapered triangles) + 1 (Circle of course involving the drawing) = 42, in a reference to 6 complete sets, this is 6 sets with 7 types of world each, IE sets where by force of evolution their Planets schools (6th) already know their Primitive Planet (7th) Respe Ctivo. Remembering that 42 planets is the amount of planets that appears represented in each of the "rings" of the Great "8" of August 2008, IE, These are the six sets of seven types of planets that evolve more closely.

## **E 111) Agroglyph in July in England:**

[Http://www.cropcircleconnector.com/2013/hilcott/hilcott2013.html](http://www.cropcircleconnector.com/2013/hilcott/hilcott2013.html)

Up another Agroglyph in England. If we count 7 circles from the 3 smaller circles including these and going to the slightly larger circle where they begin, in the periphery, the 12 smaller circles have 1 sets of 7 types of worlds. If we count only the 12 smaller circles of the periphery of the large we have the representation of the 12 planets of still physical life present in 3 sets of 7 worlds. If we count 12 smaller circles + 6 large circles

we have 18 in a reference to 3 sets of 6 worlds, that is, sets without their primitive planets. If we make 12-3 (smaller circles from the most tapered end of the drawing) we have 9 in a reference to the 9 worlds of already only spiritual life present in 3 sets of 6 or 7 types of planets. If we count  $12 + 6 = 18$  and Decrease 7 (the 7 circles of the tapered tip) We have 11 in a reference to the 11 attributes of the spirit. If we count 12 small circles + 7 circles of the tip we get 19 in a reference to 3 sets of 6 types of world where one of these sets already has its Planet School (6th) in contact with its respective primitive world (7th). If we add up all the circles of the drawing we get 25 from where we take that  $2 + 5 = 7$  in a reference to the 7th planet or primitive planet that should be found by the Earth to carry out evolutionary work for the population that dwells there, just as the aliens of the past have done co M your visit to Earth. Finding visiting and aiding a primitive planet when one is at the end of the natural resources of a planet is a natural evolutionary law and is expressed in the great formation of Mill Hill of August 2001 in my study of No. 17 published in Circles of Power I.

## **E 112) 19 Concentric circles in England:**

[Http://www.cropcircleconnector.com/2013/ridgeway/ridgeway2013a.html](http://www.cropcircleconnector.com/2013/ridgeway/ridgeway2013a.html)

Up another Agroglyph in England In July 2013 in The Ridgeway, NR Avebury, Wiltshire. We have in this drawing 19 concentric circles that would represent 3 sets of 6 Types of planets ( $3 \times 6 = 18$ ) Where in one of these sets your planet school or 6th Planet has already contacted or is very close to contact the respective primitive Planet (7th) of the sets , thus forming the result of  $18 + 1 = 19$ . The primitive planet is the circle more to the center of the drawing giving us an idea of evolutionary shyness because it is contained by all the other planets of the 3 sets that evolve their knowledge in the direction of Infinity. The outermost circle represents the world of Light (1st) most evolved of the 3 sets because it is he who commands them. And as this planet of greater evolution should already be losing its material crust, that is, dematerializing and entering the universe of absolute

logic of Universal intelligence only with its fluidical structure it is natural that in the sets that belongs to this world of light is emerging a primitive new world so that when the world of light comes out from our universe material the sets count again with 6 kinds of worlds, for then the Primitive World (7th) will already have evolved to the classification of Planet School (6th). As we know the worlds evolve in domino effect in each sets.

## **E 113) 1 Sets with 7 types of planets:**

[Http://www.cropcircleconnector.com/2013/allcannings/allcannings2013a.html](http://www.cropcircleconnector.com/2013/allcannings/allcannings2013a.html)

Above we have a Agroglyph where are represented 3 semi circles and + 3 triangles, which gives us 6 elements or a sets of 6 types of planets. If we count + the circle clear to the center we can verify that the sets turns to 7 types of worlds, this because this circle to the center, because it is contained by the other 6 planets represents the Primitive Planet (7th) which is the smallest evolution in a sets of 7 types of worlds. This world only goes into the accounting of the sets, changing it to 7 types of worlds when it is already in a position to be found by the Planet School (6th), which is the same classification of planet Earth. If we count the 7 parts described above and + 3 Sides of the triangle + 3 sides in perspective + 3 arcs and + 3 apparent vertices we count in the total 19 items refers us to an allusion to 3 sets of 6 types of worlds where one of these sets already accounts for its primitive world, in other words, the Primitive World (7th) has already been found by the planet School (6th).

## **E 114) The Big ring:**

[Http://www.lucypringle.co.uk/photos/2013/giants-grave-cropcircle2207-2013.shtml](http://www.lucypringle.co.uk/photos/2013/giants-grave-cropcircle2207-2013.shtml)

Up another Agroglyph in England in June of 2013. We have 19 medium circles, + 4 circles of 5 ° larger size, + 2 Circles of 4th largest size, + 2 circles of 3 ° larger size, + 2 circles of 2nd largest size and + 1 circle of large size, totaling 11 circles. We have still 28 circles, which are the smallest size in the drawing, on the periphery of the Agroglyph.

Let's do the analysis.

11 circles correspond exactly to the 11 attributes of the spirit he develops in the countless reincarnations.

$28 - 11 = 17$ , in a reference the first 17 spiritual categories that make their evolution reincarnated necessarily.

$19 =$  a reference to 3 sets of 6 worlds where one of them already accounts for the meeting of their respective primitive world.

$19 - 1 = 18$ , in a reference to 3 sets of 6 types of worlds That evolve more closely..

$19 + 2 = 21$ , in a reference to 3 sets of 7 types of worlds, all of them already with their primitive world accounted for.

$28 + 4 + 2 + 2 = 36$ , in a reference to 6 sets of 6 Types of worlds, sets that evolve more closely as it is explored in each ring of the large "8" of 2008, and these 6 sets here still do not account Your primitive world.

$4 + 2 = 6$ , in a reference to a sets with 6 types of worlds.

$4 + 2 + 1 = 7$ , in a reference to a sets with 7 types of worlds, that is, already with their primitive world accounted for.

$4 + 2 + 1 = 7$ , in a reference to the 7th planet or Primitive planet that we on earth should meet within a while.

$28 + 11 = 39$ , and  $39 + 2 + 1 = 42$ , IE 6 Sets with 7 types of worlds, such and which is exploded in each ring of the great "8" of August 2008.

$4 + 2 + 2 = 8$  in a reference to universal logic, because the symbol of the universe or infinity is an "8" lying down and the universe is governed by laws which equates to the logic of acting of these laws.

$6 + 2 + 1 =$ , in a reference to the 9 planets of life already only spiritually present in 3 sets of 6 or 7 types of worlds. $11 + 1 = 12$ , in a reference to the 12 still physical life planets present in 3 sets of 7 types of planets.

Normally the sets of planets contain 6 kinds of them but when the planet of the most evolution of the sets Dematerializes and enters to the universe of absolute logic of Universal Intelligence Another planet of lesser evolution already has to be able to be

elevated to the category of World School p So the sets is again with six types of worlds. And the planet that will be elevated to the condition of Planet School (6th) is the Primitive Planet (7th) that when enters to the sets makes it with 7 types of planets. It's an ongoing process of evolution of the planets within the galaxy.

## **E 115) The beautiful Alien Star:**

[Http://www.cropcircleconnector.com/2013/milkhill/milkhill2013.html](http://www.cropcircleconnector.com/2013/milkhill/milkhill2013.html)

Agroglyph in Milk Hill. Nr Alton Barnes, Wiltshire In August 2013. For see that in this Agroglyph the amount of 7 repeats because we have 1 clear circle, 1 green circle, 1 star, and + 4 clear "arrows" on the corners of the star. To me it is the representation of the 7 types of worlds composing a set already with their primitive world. If we add to the sum of 7 the four points of the star we have 11 in an allusion to the 11 attributes of the spirit. If we add to the 11 The 2 ends of each of the "arrows", in a total of 8 we obtain  $11 + 8 = 19$ , in a reference to 3 sets of 6 types of worlds where one of these sets has already found its primitive world. The sum of 8 refers to the universal logic that also governs the evolution of the planets, where there is a law that shows us, according to the great formation of Milk Hill of August 2001, that when a Class 6 planet (similar to the Earth in evolution) is declining its natural resources, the humanity of this planet finds a new primitive planet. So, the sets in question where there are already 7 types of worlds must be the sets to which the earth belongs. We observe that there is a clear tip that part of the outer circle that represents, in the case, the world of the greatest evolution of the sets or World of Light Pure (1st) that shows us that this world is already entering the universe of absolute logic of Universal intelligence. Because of this world already being disconnected from the sets of material worlds is that it is aggregated to the sets of 6 worlds the primitive world, through its discovery by the World School (6th).

## **E116)The Concentric hubcaps's:**

[Http://www.cropcircleconnector.com/2013/stonehenge/stonehenge2013a.html](http://www.cropcircleconnector.com/2013/stonehenge/stonehenge2013a.html)

This Agroglyph Was Found in Stonehenge, nr Amesbury, Wiltshire In August 2013, In England. We have five segments of concentric arches and two more circles in the center. This gives us the amount of 7, or a set with seven types of planets. The 5 arc segments represent the 5 types of worlds hierarchically superior to the planet Earth is that it is a world school or 6th evolutionary category. Now, the ARC segments have two sides (the curved and the rectum), if we multiply by 5 we have 10 and as they are in four quadrants we have  $10 \times 4 = 40$  and adding + the 2 core circles we get 42, coincidence...???!! No, just the logic that shows us the same number of planets in each of the rings of the Great "8" of August 2008, this is the 6 sets of 7 types of planets that evolve more closely. If we add 20 + the central leaked ring we have the amount of 21 or 3 sets of 7 types of worlds, or the 3 sets that evolve much more closely. Notice that to count only as 1 the center circle we call it the leaked ring giving it new name and new form but within a real interpretation. If we add the triangles that form from the junction of the arc segments we get 20 and add + the 2 central circles we get 22, what if we do  $22 - 5$  (Arc segments in 1 quadrant) = 17, i.e. the first 17 spiritual categories that evolve reincarnating mandatorily and on the planets of still physical life. If we count a quadrant with 5 arcs and + 2 central circles we get 7 and if we multiply by 4 we have 28 and adding the outer thin circle we get 29 from where we can take that  $2 + 9 = 11$  in a reference to the 11 attributes of the spirit. Now, if we count the three sides of the triangles that form at the junction of the Arches we get a total of 60. And if we add to these 60 the 10 sides of a row of 5 concentric arches we have 70. And if we still add to this the 2 inner circles we get the amount of 72, i.e. 12 sets of 6 types of worlds, i.e. sets without accounting for their respective primitive worlds. Note that in the great "8" of August 2008 are represented a total of 84 planets, i.e. 12 sets of 7 types of worlds, IE sets each with its primitive world accounted for. Nationality if we now count the 3 sides of the lined triangles that add up to 15 in each row + the outer circle we have 16 and multiplied by 4 is = 64 and adding up it to the total of the bows that add up to 20 we obtain 84 worlds, now yes in accordance with the In the Big "8" of 08/2008.

## **E 117) The Double spiral:**

[Http://www.cropcircleconnector.com/2013/silbury/silbury2013a.html](http://www.cropcircleconnector.com/2013/silbury/silbury2013a.html) In this drawing found in 8/08/2013 in Silbury Hill (2), Nr Avebury, Wiltshire England, there is a double spiral. Being that on each side, if we draw a straight line uniting the three circles, we have six thin spirals and six wide spirals. In the center we have 1 planet represented by a circle larger than the two circles of the ends. We don't think the planet in the center is in the 7th fine spiral, counting on either side. We then have a total of 12 fine spirals and 12 wide spirals. 7 refers us to the sum of 1 sets of seven types of planets. 12 is the amount of living planets still material present in 3 sets of 7 types of planets.

$12 + 12 = 24$  where this represents the amount of life planets still material present and 6 sets of 7 planets.

$6 + 3 = 9$ , which demonstrates the number of planets of life already only spiritually present in 3 sets of 6 or 7 types of planets.

$6 + 6 + 6 = 18$  Amount representing 3 sets of 6 types of planets, i.e. sets without the Primitive Planet (7th) and also represents the number of planets of life already only spiritually present in 6 sets of 6 or 7 types of planets.

$24 - 3 = 21$ , where we have the representation of 3 sets of 7 types of planets, that is, sets that already account for the encounter of their primitive planet.

$12 - 1 = 11$ , we have the 11 attributes of the spirit.

$11 + 6 = 17$ , in a reference to the first 17 spiritual categories that make their evolution reincarnated necessarily on the planets of still physical life.

6 is the representation of a sets with 6 types of worlds or a reference to the Planets School (6th), similar in evolution to the Earth.

3 It means that the planets evolve into two others, of equal evolutionary category but of two other different sets thus constituting the 3 sets that evolve More closely interwoven, such as the great "8" of August 2008.

$7 + 7 = 14$  ie, the representation of 2 sets of 7 types of planets that evolve intertwined more closely, naturally allied to a third set that is a little more evolutionary of these

two. Another thing is that the spiral shows us that a primitive planet in 7th position will evolve and put itself in 6th position, that is, it evolves from the 7th most timid position to the center for the position of Planet School (6th). It can also show us this Agroglyph that the primitive planet is already aware of 2 Planets School (6th) belonging to two other sets and that therefore lacks a planet school of a sets, of these 3 that evolve more closely, find this primitive planet, because according to my Study and 7, on my blog, three planets School of 3 different sets They must work in the new primitive world to be found, so missing a school planet (6th) of a sets find this primitive world, I think it is the earth. We can also make an account involving the day (8) and the month (8) whose sum is 16 and joining more 24 (spirals) we obtain a total of 40 which for me designates 33 spiritual categories and + 7 types of worlds.

## **E 118) The 6 forked triangles:**

<http://www.cropcircleconnector.com/2013/chute/chute2013a.htm>

Causeway kick, nr Tidcombe, Wiltshire. Up another agroglyph in England. We have in this the representation of 6 triangles with a recess and a circle marked by the folded cereal. If we count only the figure of the triangles we have the amount of 6, or a set with six types of worlds. But the triangles fork, so we have + 12 elements that add up to the previous 6 provide us with 18 or 3 sets of 6 types of worlds. If we add the 6 clear circles we get 24, i.e. the exact amount of living worlds still materially present in 6 sets of 7 Types of worlds, this is sets that already account for their respective primitive worlds. The amount of 18 also corresponds to the worlds of life already only spiritually present in 6 sets of 6 or 7 types of worlds. Remembering that in every ring of the great "8" of August 2008 this represented the sum of 42 worlds or 6 sets of 7 Types of worlds. If we add to the 18 the tenuous circle that divides into two triangles we get 19 in a reference to 3 sets of 6 types of worlds where one of them already accounts for their primitive world (7). But there is Another deeper aspect in this agroglyph. If you notice, we see that each of the main triangles and more to the center consists of 5 sides namely: Two larger sides, two smaller

sides formed by the curved line of the tenuous circle, and + a semicircle. The 12 external triangles to the tenuous circle are formed, each one, by 4 sides namely: 2 larger sides, 1 side formed by the curved line of the tenuous circle and + 1 semicircle. So, to the total we have 5 sides + 4 sides + 4 sides = 13 parts. If we add to 13 the circle formed by the curved line to the center of each main triangle formed by the 3 component figures, we obtain 14 and if we multiply  $14 \times 6 = 84$  or is the same number of planets expounded in the sum of the 2 rings of the Great "8" of August 2008, which represents 12 sets of 7 types of worlds, that is, sets that already account for their respective primitive worlds. This is an ideal situation made up of 84 worlds of 7 kinds. I believe that certain results, like these 84 planets, are somewhat difficult to find seen to seem as often as we have to recount parts that have already been accounted for. That's because it might want to show us that the sets of worlds sometimes are only completed with 6 or 7 worlds because the sets use worlds of other sets in a sort of sharing, perhaps because certain planets, by the work of humanity that lived there, does not harbor more life on its surface, then the spirits that still have to Reincarnate are allocated on planets of other sets. This confers with The June 2010 Agroglyph of my study E 79 and also the study E6 where there are also 6 sets of 7 Types of intersectional Worlds Inside the Triangle.

## **E 119) 7 Geometric figures:**

<http://www.cropcircleconnector.com/2013/harewell/harewell2013a.html>

This August 2013 in Harewell Lane, Nr Besford, Worcestershire In England we have 3 larger and more external circles, 2 intermediate hexagons and + 2 inner circles in a total of 7 figures. We have that the outer circles represent the 3 worlds of greatest evolution in a set with 7 worlds represented in these parts of the agroglyph, these three worlds are also the most evolved of the 3 sets. We also have 6 triangles Bigger and + internally other 6 triangles Smaller. So, we have the total 2 sets with 6 kinds of worlds and a set with 7 kinds of worlds This already accounts for the encounter of its Primitive Planet (7th). But on the other hand, we have 12 triangles with a total of 36 sides + 12 Sides of the 2

hexagons and + 5 circles in a total of 53 where we take  $5 + 3 = 8$  in a reference to Universal logic. If we focus only on the center of the figure we see that we have 18 Sides of the 6 triangles + 2 circles and + hexagon which gives us the amount of 21 planets or 3 Sets complete with 7 kinds of world each. Now if we add the amount obtained at the center of the figure that is 21 and + the 18 sides of the triangles Bigger We have 39 and if we add to this the 3 larger and + external circles we obtain, now Yes, 42 elements, amount equal to exposed in each of the rings of the big "8" of August 2008, IE 6 Sets complete with 7 kinds of world each, this is sets that already account for their respective primitive planets (7th). Attention, if we count the amount of the center of the drawing, 21 + 12 Triangles We obtain 33, in a reference to the 33 spiritual classes that evolve in the 7 types of worlds present in our universe. The amount of 12 corresponds to the 12 worlds of life still materially present in 3 sets of 7 types of planets. If we add the amount of the center, 21 + 12 sides of the hexagons, + 18 sides of the larger triangles and + the 3 larger and external circles we obtain 54, from where we take  $5 + 4 = 9$ , which represents the number of worlds of life already only spiritual present in 3 sets of 6 or 7 planets. The planet sets evolve from three to three more closely.

## **E120) One more numeric puzzle:**

[Http://www.cropcircleconnector.com/2013/hackpenhill4/hackpenhill2013d.html](http://www.cropcircleconnector.com/2013/hackpenhill4/hackpenhill2013d.html)

In August Of 2013 there is one more Agroglyph in Hackpen Hill, England (4), nr Broad Hinton, Wiltshire, where we can observe 22 circles and + 22 "links" in a total of 44 parts. This amount will row us to 33 spiritual categories + 11 attributes of the spirit. We also have at the intersection between the circles and the "links" 22 triangles that add up to the 44 make up 66 in a double allusion, i.e. 6 and 6 show us two school class worlds that will probably unite, and, If we add  $6 + 6$  we get 12 that equates the amount of life planets still present materials In 3 Sets of 7 types of planets, which are the 3 sets that evolve more closely hitched, as it is seen in the great "8" of August 2008. But if we count the three sides of the 22 triangles, we get 66 that add up to the 44 of the "links" and the circles is equal to 110 and if we add to this the triangles that are in 22 get 132. Now we observe that if we add  $11 + 0 = 11$  which is equivalent To the amount of attributes of the spirit,

and if you add  $1 + 32 = 33$  which is equivalent to 33 spiritual categories. If we take the amount of 12 ( $6 + 6$ ) and decrease from 33 we get 21 that is equivalent to the 3 sets of 7 types of planets. And if we add  $12 + 132$  we get 144 That if we divide by 2 we find 72 that equates to the 12 sets of 6 types of world, this is sets without their respective primitive worlds. If we add  $1 + 4 + 4$  We get 9 that is the number of worlds of life already only spiritually present in 3 sets of 6 or 7 types of planets. The number 2, with which I made the division, I removed it from the quantity of the two most expressive parts of the agroglyph which are the circles and the "Links".

## **E 121) A complete Agroglyph:**

<http://www.cropcircleconnector.com/2013/Etchilhampton/Etchilhampton2013a.html>

Above, In August Of 2013 In England in Etchilhampton Hill, Nr Devizes, Wiltshire a somewhat complex figure, but that, if well analyzed it reminds us of the already known numbers that has its origins in the spiritualism of the Christian rationalism doctrine, founded in Brazil in 1910 and also in the analysis of the great "8" of August 2008. We have 6 dominant figures of which 3 have 3 sides each with a total of 9 sides and 3 others with 4 sides each which gives us a sum of 12 sides. 9 is the number of planets of life already only spiritual present in 3 sets of 6 or 7 types of planets and 12 are the worlds of life still material present in 3 Sets of 7 types of planets that is, sets that already account their respective primitive worlds properly found by their school worlds (6th). The 3 central dark circles may, perhaps, provide us with the idea of the evolutionary difference between 3 worlds of equal category but of different sets because according to the big "8" There are three sets of planets that evolve more closely. The large outer light circle + the 3 central circles Dark + the 2 central light circles equate to a set of 6 types of worlds i.e. a set without their primitive planet that is added to this when the planet's most evolving sets, The Pure Light (1st) is dematerializing to penetrate the universe of absolute logic of Universal intelligence, and he only penetrates it after exercising the function of the most evolving planet of the 3 sets that evolve in the trailer more closely. But as the dominant

figures have 3 outlines each we have  $21 \times 3 = 63$ . If we add to this the 5 small and peripheral triangles we get 68, if we add + the 3 dark and smaller circles grouped in the periphery we get 71 that if added to the outermost clear circle gives us 72 which equate exactly to 12 sets of 6 types of worlds, that is, sets that do not yet account for their respective primitive worlds. If we count the sides of the 5 peripheral triangles that add up to 15 + the 3 dark and smaller circles grouped we get 18 in a reference to 3 sets of 6 types of worlds. If we do  $12 \times 3 = 36$  We obtain a reference to 6 sets of 6 types of worlds. If we add to the 36 the 6 pointy cones of the periphery we obtain 42 in a reference to 6 sets with 7 types of worlds, that is, sets that already account for their respective primitive worlds such and which is recorded in each of the "rings" of the Great "8" of August 2008. If we add  $12 + 5$  small triangles We get 17 in a reference to the first 17 spiritual classes that make their progress reincarnated necessarily in the Planets School (6th). If we add the same small triangles and plus the 6-pointed cones we get 11 in a reference to the 11 attributes of the spirit. If we add the 5 small triangles + 2 inner light circles we get 7 in a reference to a set with 7 types of worlds. In these 4 studies I propose a theory based on the teachings of the doctrine of Christian rationalism where I present solutions, some partials, to the circles that naturalist of spirituals different from those that refer to material science. I present to all the drawings the same base without, often, to dwell on the complexity of the layout where I believe are messages deeper than the course of the ages will become known to us. I am sure that the circles I have analyzed express the same universal truth of Christian rationalism that evolution is the cause and the leader of life. Unfortunately, I do not count until today with the sympathy of the Brazilian ufology not so little of the representatives of the doctrine. I believe you're working for the future because my ideas are correct. It is very important the research work of crop circles for the future since we are not sure of a worldwide contact. I really appreciate Lucy Pringle and the Mark Fussell and Stuart Dike of Site Crop Circle Connector, all from England. I did, as the crew of the Enterprise Ship, a search of 5 years for new worlds, new Civilizations... (August 2008 to August 2013). Sorry I couldn't resist the comparison...! The big "8" and the formation of Milk Hill of August 2001 are the big key for me. In this I understand that we have an allusion to the movie "2001 A space odyssey", released on 1968, because it resembles the large space station turning to the sound of the Blue Danube waltz, and 1968 to 2001 we have 33 years, that is, it fits a souvenir to the 33 spiritual categories. Only that the odyssey there is that of the planets that are created in the center of the galaxy and go through an evolutionary path that culminates with its return to that center.

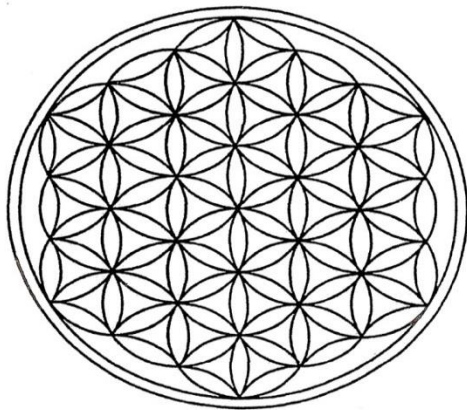

## E 122) 13 sets of 8 strokes:

[Http://www.cropcircleconnector.com/2013/cooks/cooks2013a.html](http://www.cropcircleconnector.com/2013/cooks/cooks2013a.html) , in this drawing found in Cooks Plantation, nr Beckhampton, Wiltshire, In England we can see up on the outer perimeter 13 sets of 8 strokes in a total of 104 strokes. In the innermost part we have within the clear part an "arrowhead" with 13 parts and more internally another "arrowhead" with 12 parts. laterally to the smaller "arrowhead" we have 2 curved cones with 3 parts each. Below we have 1 Half Moon + 2 "petals". We also have below 1 small circle clear and on the sides of the lighter center we have 2 dark semicircles. We also have a clear oval part where the most internal elements are inserted. For me the number 8 represents the universal logic, because up to the issue No. 43 of the book "Christian Rationalism" this attribute of the spirit is reported with the 8th as it was initially intuited to Luiz de Mattos. If we notice well the number of internal figures to the outer larger circle is 11 or is an allusion to the 11 attributes of the spirit. Inside Of the central clear part we have 7 elements that set up 1 sets with 7 kinds of worlds. If we add up all the internal parts we have:  $13 + 12 + 6 + 2$  (cones)  $+ 1 + 2 + 1 + 2 + 1 = 40$ , with this amount we unfolded in 33 spiritual classes and  $+ 7$  types of worlds. If we add  $13 + 8 = 21$  we have a Reference to 3 Sets of 7 types of worlds, that is, sets that already account for their primitive world. If we add  $104$  (dashes)  $+ 40$  we get  $144$  IE  $2 \times 72$  and we know that 72 mean 12 sets of 6 types of worlds, that is, sets which Their worlds schools have not yet found the respective primitive world of the sets. 72 would be like a big double "8" from August 2008 without the 12 primitive worlds. I have no doubt that our galaxy is teeming with life and we for evolutionary issues are still out of this wonderful reality. One day we'll get there. We can still observe that the 5 internal traces of the 13 sets that make up the outer perimeter form, if we look from the inside out, the number 9 that is added to the other 3 remaining traces of the set add up 12, having therefore a mention of the 9 worlds of life already only spiritually present in 3 sets of 6 or 7 worlds, and 12 that represent the

worlds of still physical life present in 3 sets of 7 worlds. If we look from the outside into the drawing we see that the digit that forms with the 5 Central Strokes is the 6th in a reference to the Worlds of Class 6 (school) similar in evolution to the Earth world. If we add  $N^{\circ} 9 + 8$  (the number of strokes that form 1 set) we get 17 in a reference to the first 17 evolutionary categories that reincarnate in the planets school. If we add  $N^{\circ} 6 + 8$  We get 14, in a reference to the 2 sets of 7 planets that evolve more closely. August 2013.

## **E 123) The Flower of life:** (Rebeginning of the studies In May 2014 ).

FLOR DA VIDA

This figure can also be "read" as if it was an Agroglyph. We have 30 petals lined up in 7 diagonal lines + 30 petals aligned in diagonal lines in reverse direction and + 30 petals aligned in 7 vertical lines. We have 19 complete "circles" + 18 "circles" incomplete. We have 54 "triangles." Each complete "circle" has 12 petals + 6 triangles in a total of 18, that is, they would represent 3 sets of 6 types of worlds each, that is, sets that do not yet have their primitive planet (7th). Each side of the hexagon has 3 aligned petals. If we make  $54 + 18$ , we get 72 or 12 sets of 6 types of worlds, remembering that the great "8" of 2008 presents us with 12 sets with 7 worlds each already accounting for the primitive world of each of them. The digit 6 reminds us of a set of six types of worlds. Digit 7 reminds us of 1 sets of 6 types of worlds + the primitive planet. If we do  $(30 \times 3)$  and subtract 54, we get 36 in a reference to 6 sets of 6 types of worlds. If we do  $30 - 19$  We get 11, in a reference to the 11 attributes of the spirit. If we effect:  $54 + 30 = 84$ , we have 12 sets with 7 types of worlds. If we do  $7 \times 3$  (2 diagonal lines and + 1 vertical line) = 21, we get the amount of 3 sets of 7 types of worlds. The 12th reminds us of the amount of 12 worlds of life still material present in 3 sets of 7 types of worlds. If we make  $6 + 3$  we get 9 in a reference to the number of worlds of life already only spiritually present in 3 sets of 6 or 7 types of worlds. If we add  $30 + 6 = 36$ , we get the amount of 6 sets of 6 types of worlds. If we add up to  $30 + 12 = 42$  We get the amount of 6 sets of 7 types of worlds, that is, sets that already account for their primitive world expressed in each Big "8" Ring of 2008. If we do  $30 + 3 = 33$ , or the representation of the 33 spiritual classes. If we do  $54 - (19 + 18) = 17$  in a reference to the first 17 spiritual categories that make their evolution reincarnated in the worlds of still

material life. The 19th reminds us of 3 sets of 6 worlds, one of which has already found its primitive world (7th) through its World School (6th). If we add  $(3 \times 30) + 54$  We have 144 or  $2 \times 72$ , IE  $2 \times 12$  sets of 6 types of worlds.  $6 \times 19 = 114$ .

## **E 124) The 17 Elements:**

[Http://www.cropcircleconnector.com/2014/hambledon/hambledon2014a.html](http://www.cropcircleconnector.com/2014/hambledon/hambledon2014a.html)

Figure found in 30 of April 2014 at Hambledon Hill, nr Iwerne Minister, Dorset in England. We have in this drawing 3 small circles, 1 large circle in the center, 6 lines, 6 "slices" and + 1 outer circle. To the total are 17 elements. I assume that 6 is a reference to our world Earth Class 6 (school) and also the 6 planets that make up the sets or family to which we belong. If we add  $6 + 6$ , we get 12 in a reference to the 12 planets of still physical life present in three sets of seven planets that add up to 21 planets. The amount of 17 refers to the first 17 spiritual categories that have to make their evolution reincarnated necessarily. Now, as to terms in the center a larger circle this could be representing our sun and indicating, just like my studies E30 and E22 that there are two more planets in the same orbit of the Earth and that these planets are of the same category (school) as the Earth. That is, we have or had three planets in the same orbit of the Earth, today maybe there can be just us and another diametrically opposed as in the study and 22, being that the third world that remotely had life would be the moon, but that perhaps lost the life itself because of an atomic World war and was wandering being trapped by the magnetic force of the Earth. It is only a theory that explains the above design and also the studies cited. That is, in and 30 we have an ideal position and in and 22 we have the reality, being that this remaining planet could also be of 7th category or primitive, ie, the planet we're going to find. We remember that many planets are part of more than one sets. If we make  $17 - 3$  we get 14 or 2 sets of planets that evolve more closely. If we do  $12 - 3$  we get 9 or the number of worlds of life already only spiritually present in 3 sets of 6 or 7 worlds. If we make  $12 - 1$  we obtain 11 in a reference to the 11 attributes of the

spirit that he develops in the various reincarnations while still in the first 17 spiritual classes in the worlds of still material life. If we do  $11 - 3$  we get 8 in a reference to universal logic. 3 It is a reference to the three worlds of the same category that evolve more closely, or the 3 sets of worlds that evolve more closely according to the great "8" of August 2008. The circle is divided into 6 parts of 60 each. As I have been studying we can put a dividing line in 1 circle, horizontally (axis "x"), and above this we have the 3 worlds of life still material in every 60, this in a set of 6 worlds, and below the 3 worlds of life already spiritual, ie starting left, Mark  $0^\circ$  of the axis "x" with the planet School and ending 360 degrees after with the Planet of Light (1st). This lay out serves, I believe, for us to better analyze the design made on the back of the abducted K Tavern here in Brazil taking into account the 3 sets that evolve more closely linked together of 3 in 3 the worlds of approximate evolution.

## **E 125) The 21 elements:**

[Http://www.cropcircleconnector.com/2014/bucklestreet/bucklestreet2014a.html](http://www.cropcircleconnector.com/2014/bucklestreet/bucklestreet2014a.html)

Agroglyph found in May 2014 at Buckle Street, nr Pedworth, Worcestershire, In England. This agroglyph has 8 light semi circles + 8 light inner circles + 1 Light Center circle + 2 thin and light central circles and + 2 central green thin circles. If we do  $8 + 8 + 2 + 3$  we get 21 which is equivalent to 3 sets of 7 types of worlds each, Sets that already account for their respective planet Primitive. If we do  $8 + 2 + 1 = 11$ , in a reference to the 11 attributes of the spirit. If we do  $8 + 1$  we have 9 in a reference to the 9 planets of life already only spiritual present in 3 sets of 6 or 7 types of worlds. If we do  $8 + 2 + 2$  we get 12 or the amount of living planets still material present in 3 sets of 7 types of worlds. If we do  $8 + 8 + 1$  We get 17 in a reference to the first 17 spiritual categories that must reincarnate to evolve. If we do  $8 - 1$ , we get 7 in a reference to a set with seven kinds of worlds. If we do  $8 - 2$ , we get six in a reference to a set with 6 types of worlds, this is sets that still does not account for their respective primitive worlds. The 8th is a reference to universal logic, just as the great "8" of August 2008 introduced us to the logic of planetary evolution. If we do  $8 + 8 + 2$  We get 18 or 3 sets of 6 types of worlds each. If we do  $8 + 8 + 2 + 1$  we get 19 in a reference to the 3 sets of 6 types of worlds where one of them has already found its primitive planet (7th) through its World School (6th). The 3 central circles can represent the three planets of the same category belonging each to one of the 3 sets that evolve more closely, and the planet more to the center would be the smallest

evolution of the 3 because it is encompassed by the other 2 and belongs as a result of the sets or family of less evolution, and the most evolved would be the outermost part of the sets of greatest evolution. The center's obvious belongs to the intermediary evolution sets.

## **E 126) The 7 types of planets in the Netherlands:**

[Http://www.cropcircleconnector.com/2014/Standdaarbuiten/Standdaarbuiten2014a.html](http://www.cropcircleconnector.com/2014/Standdaarbuiten/Standdaarbuiten2014a.html)  
Agroglyph found in Standdaarbuiten, Holand. Once again, the sum of 7 circles, representing a sets or family of 7 types of planets each in an evolutionary stage, and the three worlds of greatest evolution are together because they represent the planets of life already only spiritual of the sets, i.e. the Worlds of Light (1st), diaphanous (2nd) and Intermediate (3). The other 4 worlds of lesser evolution are the planets of life still material like the earth, i.e. opaque (4), dense (5th), School (6th) and Primitive (7th) the smallest of them. Seems that it's up to our free interpretation to analyze the world of greater evolution (of light) as being the clear circle in the center of the two external or the circle of lesser thickness outside the other two. I use the classification of Christian rationalism in its basic Book 43 ° Edition for the 5 types of worlds hierarchically above our type (school), the earth being obviously the 6th type and more the presence of a primitive planet which according to the great formation of Milk Hill of August 2008 we shall find, for according to that agroglyph the entire Planet School (6th) with its natural resources at the end discovers a new and primitive planet, this is a law of planetary evolution according to deduce. While the planet School does not find a primitive planet the sets or family to which it belongs has only six types of worlds. The primitive planet is added to the sets from its discovery, then counting with 7 types of planets. All the progress of the Earth was chronologically planned in worlds greater than ours so that by the time itself we could search and explore space.

## **E 127) merged data, In Slovenia:**

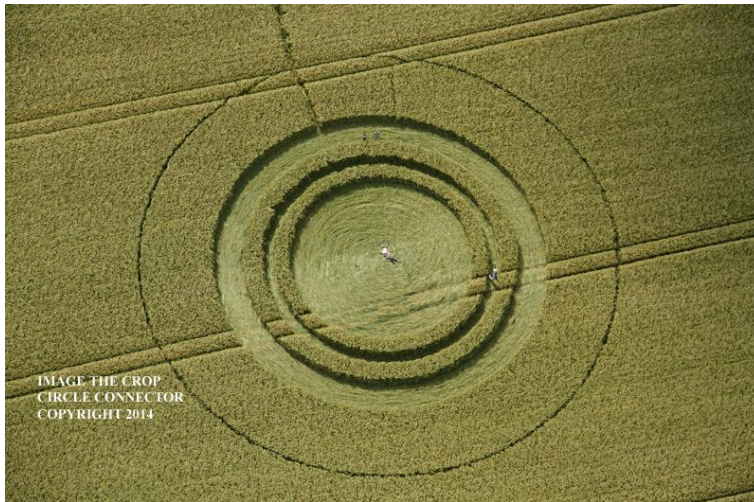

[Http://www.cropcircleconnector.com/2014/Cerkvenjak/Cerkvenjak2014a.html](http://www.cropcircleconnector.com/2014/Cerkvenjak/Cerkvenjak2014a.html)

Crop Circle found in Cerkvenjak, Slovenia in June of 2014. In this crop, in my view, we have the representation of two planets in the same orbit in diametrically opposed positions in relation to the sun, that is, lagged at  $180^\circ$ . For me it represents a planet in the same orbit of the Earth (3rd orbit), only on the opposite side of our planet in relation to the sun. We can also note another subtle detail, which is that the drawing occupies 6 tractor tracks (double lines) and 5 more tracks of cereal planted. So, we can take advantage of these quantities and do some calculations to get data that's already known to us. We have two more small circles and one big circle. If we do  $5 + 6$ , we get 11, in a reference to the 11 attributes of the spirit. If we add  $11 + 2 + 1$ , we get 14, or the two sets of 7 types of worlds that evolve more closely. If we do  $11 - (2 + 1)$  We get 8 in a reference to universal logic, remembering that even the 43 edition of the book Rationalism Christian logic appeared as the 8th attribute of the spirit. If we do  $5 + 2$  we get 7 in a reference to a set with seven types of worlds. If we do  $11 - 2$  we get 9 in an allusion to the number of planets of life already only spiritually present in 3 Sets or families of 6 or 7 types of worlds. If we do  $11 + 1$  we get 12 in a reference the number of planets still living material present in 3 sets of 7 types of worlds. If we make  $2 + 1$  we have the amount of 3, in a reference to the 3 sets that evolve more closely and also to the 3 worlds of equal evolutionary category, present in these sets, and that act together. As if they were elements, belonging to different families, but which unite, by affinity, as 3 friends, for sharing similar ideas. By overlapping some sums, we obtain:  $11 + 8$  equal to 19, ie 3 Sets of 6 types of worlds where a set has already found its primitive world (7th) through research carried out by its World School (6th). If we do  $19 + 2$  we get 21 or 3 complete sets with 7 kinds of worlds each. If we do  $19 - 2$  we get 17, in a reference to the first 17 spiritual categories.

## **E 128) Hierarchical classification:**

[Http://www.cropcircleconnector.com/2014/westkennettlongbarrow/westkennettlongbarrow2014a.html](http://www.cropcircleconnector.com/2014/westkennettlongbarrow/westkennettlongbarrow2014a.html)

In West Kennett Longbarrow, Nr Avebury. Wiltshire, U K in June of 2014. As the doctrine of Christian rationalism informs us up to the 43 edition of its basic book, we have above the planet Type School (6th) plus 5 types of worlds. This classification is well appointed in my study E36 "an undeniable image". Above we have again 7 concentric circles being that 3 of them represent the worlds of still material life and the other 3 worlds of life already only spiritual. But we have, more externally, a tenuous circle and this represents the world of the greatest evolution of the sets or family, because it is already dematerializing and begins to enter the universe of absolute logic of Universal intelligence or 8th place. The atomic matter of this World of Light (1st) will be reused for the manufacture of another new planet as I deduce in my studies E17 and E27. The world of light penetrates the universe of Universal intelligence only with its fluidics structure. See that the fine line that marks the world of light shows us that this world has little difference between itself and the universe that allocates it (Represented by Field of Standing cereals), that is, it integrates into the perfect logic and harmony of the universe of absolute logic of Universal intelligence. On the other hand, we can also see that there are 6 worlds, 3 of life already only spiritual and 3 of life still material, the first planet, now then represented by the outer bulky circle, where there is only a tenuous line to separate it from the universe, which refers us to the same analysis proposed earlier, when it was seen represented integrally by the thinnest line, making the sets with 7 worlds and not just 6, as now in this last place, not being represented in this, the primitive world. That is, there are two ways to see this drawing: a set with 6 types of worlds or a set with 7 types of worlds, the differential being the primitive world (7). And this mobility represented in the design between the two types of sets, now with 6 worlds and now with 7 worlds is really what happens, because there is a continuous cycle in the sets where they are now with 7 worlds, for the presence of the primitive world is allocated, and now they are with 6 worlds because the world of Higher Evolution (1st) moves out of the material

universe and the Primitive World (7th) ascends to the category of World School (6th). And again, when the school world is in the process of becoming a dense world (5th) you will find a primitive world. The Earth is a school world and is about to find a primitive world.

## **E 129) A full star :**

[Http://www.cropcircleconnector.com/2014/popham/popham2014a.html](http://www.cropcircleconnector.com/2014/popham/popham2014a.html) Circle found in Black Wood, Nr Popham, Hampshire, in England in June of 2014. In this we can see that there are 6 light triangles and 6 green triangles and + 6 green parts between the triangles, external to these. Each of these amounts of 6 represents, initially 1 sets or family of 6 types of worlds. We then have the 2 sets that evolve more closely and a more evolved sets that is also tied together forming a set of 18 planets. But we have a very thin circle externally and, So, it means that one of these three sets already know, through its school world, its primitive world, because the outermost ring would then represent the world of greater evolution of 3 Sets, a World of pure light (1st) featured, as comprehensive. Then reappears here an already known amount of so many previous circles that is the amount of 19. But, if we count the three sides of each triangle we have  $3 \times 12 = 36$ , which then redirects us to six sets of six types of worlds, where none of them have yet contacted their primitive planet. And if we add to the 36 the 6 external parts to the triangles then we get the amount of 42 that is, we have then 6 sets of 7 types of worlds, that is, each set already accounting for its primitive planet, ideal situation represented in each ring of the great "8" of August 2008.

## **E 130) 11 attributes and 2 sets of worlds:**

<http://www.cropcircleconnector.com/2014/Standdaarbuiten2/Standdaarbuiten2014b.htm>

Found in Standdaarbuiten (2), Holland, In June of 2014. We have here in the same alignment, outside the ellipse 3 circles + 3 circles. On the largest size axis of the ellipse, transversal to the previous, we have two more outer circles. Internally in the ellipse we have it, which forms 1 circle clear + 1 circle in green and + 1 inner circle clear. There are, in total, 11 circles, which to me are a reference to the 11 attributes of the spirit. The 6 aligned circles, outside the ellipse, are a reference to the 1 sets or family of 6 types of worlds. As the ellipse splits into 2, we have on its axis of larger size the amounts of: 2 outer circles + 2 (parts of the ellipse) + 1 circle in green and + 1 light inner circle, totaling then more a sets or family of 6 types of worlds. Remembering that 12 is also the amount of living worlds still material present in 3 sets of 7 types of worlds. If we just consider That there are 8 circles external to the Ellipse + the ellipse itself + the 4 parts in which the inner circle is divided green + 1 Clear Center circle We have the amount of 14 that equates to the 2 sets of 7 Types of worlds, this is the 2 sets or families that evolve + next. If we put that to the sum of 14 we can add 1 central stripe, which divides the ellipse and + 2 parts of the ellipse we have then 17, which in my view refers to the first 17 spiritual categories that perform their improvement reincarnating necessarily, of course, in the worlds of life Ain of the material. If we add the 8 outer circles to the Ellipse + 2 halves of the Ellipse + 4 parts of the green circle, built into the ellipse, we have 12 again. If we do 8 outer circles + the ellipse we obtain 9, in an allusion to the 9 worlds of life already only spiritually present in 3 Sets or families of 6 or 7 Kinds of Worlds.

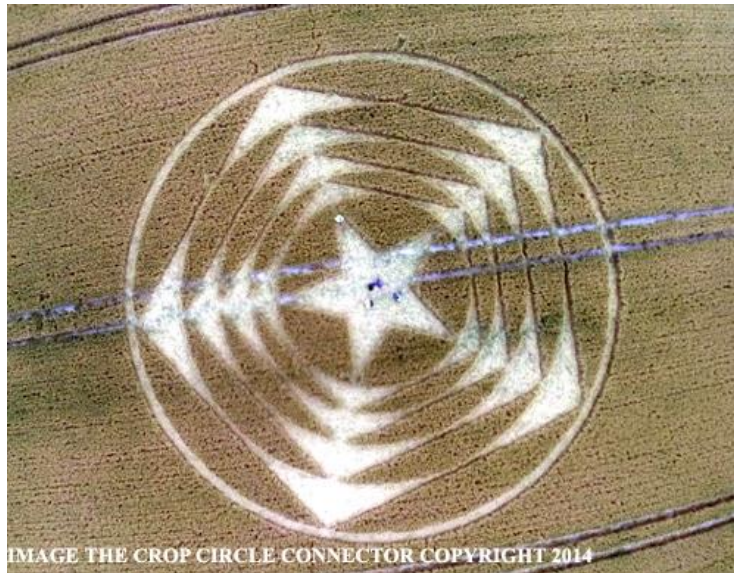

## **E 131) 28 spirals and 11 attributes and + :**

[Http://www.cropcircleconnector.com/2014/banburyrings/banburyrings2014a.html](http://www.cropcircleconnector.com/2014/banburyrings/banburyrings2014a.html) This appeared also in England in Badbury Rings, nr Wimborne Minster, Dorset, in June 2014. The two spirals have in its length, on one side three spirals and the other 4 spirals. In the width we also have, on one side, three spirals and another + 4 spirals. Each of the rectangular spirals represents 2 sets or families of 7 types of worlds because they add up to 14 spirals in total. The two highest-length spirals represent the two most evolved sets. In the Triangle Larger or rectangle triangle, along the semicircle containing the spirals we have, not counting the circle at the vertex: 3 circles on each side of the triangle and + 1 circle in the center of the opposite side of the vertex. We have another sets or family of 7 types of worlds, and the most evolved are those represented by the three larger circles in the respective centers on each side of the right triangle, representing the worlds of life already only spiritual. The remaining 4 smaller circles represent the worlds of still material life. In the second and smallest triangle we have 2 circles in the center of each side and + 1 circle in the recess that was not counted in the sets of worlds of the larger triangle and + 2 large circles, being one of cereal standing and the other on the outside, Eclipsed, of cereal folded E + 1 Small center circle well at the vertex of the smaller and external triangle, making a set of six kinds of worlds. We then have represented 6 sets or families of worlds as in the great "8" of August 2008, only that in the great "8" are represented 6 sets of 7 kinds of worlds, that is, sets that already account for their respective primitive worlds. So, we have here 5 Sets with 7 kinds of worlds and + 1 Sets with 6 types of worlds in a total of 41 elements. This points out that for 1 sets is missing the Planet School (6th) find the respective primitive World (7th) of its sets. Would it be the Earth sets? If we add up all the incrustated circles in the 2 triangles we get 11, In a reference to the 11 attributes of the spirit. If we effect  $28 (2 \text{ spirals}) - 11 = 17$ , in a reference to the first 17 spiritual categories. If we effect  $11 - 2$  Semi-circle larger and close to the spirals) we obtain 9, in an allusion to the 9 worlds of life already only spiritual present in 3 Sets

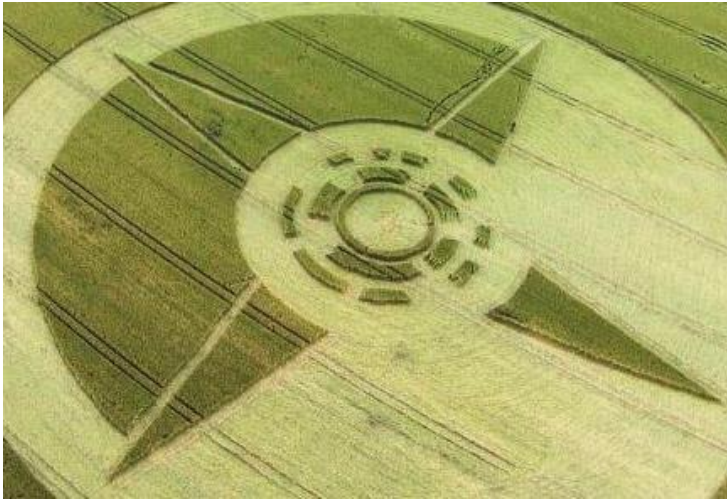

or families of 7 or 6 types of worlds. If we add  $11 + 1$  (Cone in cereal folded between the spirals) we obtain 12 in a reference to the 12 planets of life still material present in 3 Sets or families of 7 types of worlds.

## **E 132) Concentric hubcaps II :**

[Http://www.cropcircleconnector.com/2014/Wilmington/Wilmington2014a.html](http://www.cropcircleconnector.com/2014/Wilmington/Wilmington2014a.html) Built in July 2014 in The Long Man of Wilmington, East Sussex, England. Design similar to the study 116 "Concentric hubcaps" with a drawing from August 2013. In this we have 4 caps  $\times 5 = 20$ , that added to the 3 sides  $\times 5$  of the triangles formed by the star tips result in  $20 + 15 = 35$  which added to the outer light circle provide a total of 36, that is, indicate 6 sets of 6 types of planets each. If we do the following: We have, in the set of 4 concentric hubcaps 4 curved sides and 4 straight sides in a total of 8. If we add to the amount of 8 the 3 sides of the corresponding central triangle we have 11 in a reference to the 11 attributes of the spirit. If we do  $8 \times 5$  we get 40 that for me mean 33 spiritual categories + 7 types of worlds. If we take the 40 and add the central Star + 1 Clear outer circle we have 42 or 6 sets or families of 7 types of worlds, exactly as it is represented in each "ring" of the Big "8". If Add the 20 hubcaps to 1 Outer Circle We get 21, that is, 3 sets of 7 types of worlds. If we add  $8 + 1$  Outer Circle we get 9, in a reference to the 9 planets of already spiritual life present in 3 sets of 6 or 7 types of worlds. If we do  $21 - 9$  We get 12 in a reference to the 12 worlds of life still material present in 3 sets of 7 Types of worlds, this is sets that already account for their respective primitive worlds. These planets, when I quote 7 types that compose a sets or family, they're arranged in concentric areas to the center of the galaxy. The closer to the center, more evolved the planet will be, according to my study No. 30. The Planets of evolution closely relate to each other more intimately because they are in the same evolutionary zone. That is why the representation of the great "8" of August 2008 queuing 21 worlds in a perfect hierarchical order. The study No. 30 shows us well that reality. And, as in a family of human beings personalities are different, in the worlds we have seven different personalities.

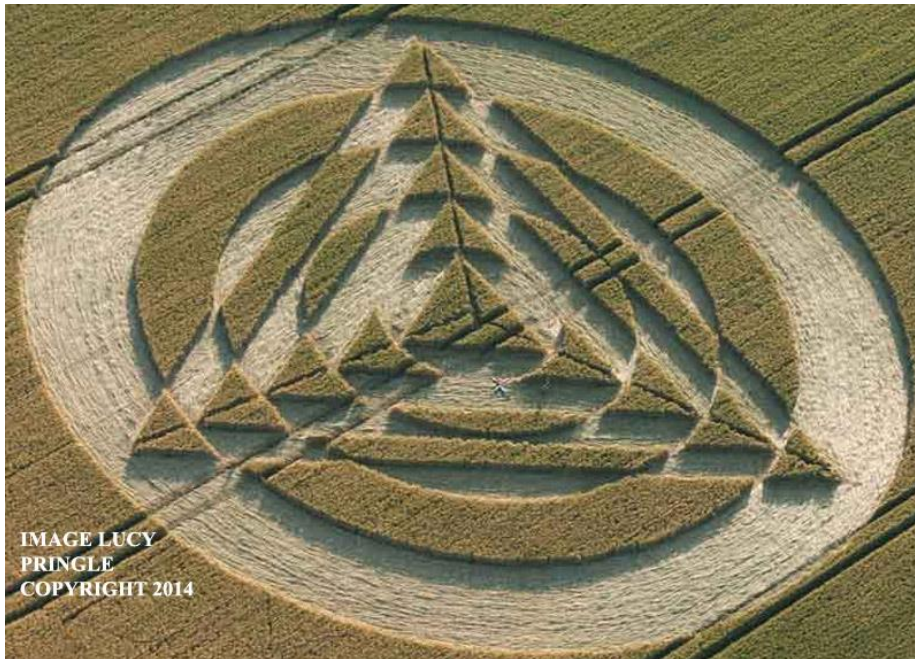

## **E 133) The 4 Círculos and The Four Tips :**

[Http://www.cropcircleconnector.com/2014/Boskovic/Boskovic2014a.html](http://www.cropcircleconnector.com/2014/Boskovic/Boskovic2014a.html) Arisen in Boskovic, Czech Republic in June 2014. In this we have well to the center 1 circle of light surrounded by 1 circle of cereal standing. Around them we have 5 segments of circles and more externally 9 segments of circle, all of this allocated in 1 medium circle of course. Starting from the edge of this middle circle clear we have 4 tips. We have also, separated by one of the ends, 2 larger circle segments, but the whole drawing is contained by 1 Great Circle of Light. So far, we have the amount of 24, and this is the amount of living worlds still material present in 6 sets of 7 Types of worlds. These are the 6 sets of worlds represented in each ring of the great "8". Now, if we do the following: Each end has three sides, so the total sides are 12 and we add up to 24 we get 36, in a reference to 6 sets of 6 types of worlds, this is sets that still does not account for its primitive world. If we add  $1 + 1 + 5 + 9 + 1 = 17$ , that is, adding the first amounts, we obtain a reference to the first 17 spiritual categories. If we add  $17 + 4$  (TIPS) We get 21 in a reference to the 21 planets that form the 3 Sets or families that evolve more closely. If we take 9 (circle segments) We have a reference to the 9 worlds of already only spiritual life present in 3 sets of 6 or 7 types of planets. If we add  $9 + 1 + 1 + 1$  we get 12 in a reference to the 12 planets of life still material present in 3 sets of 7 types of worlds. If we add  $9 + 1 + 1$ , we get 11 in a reference to the 11 attributes of the spirit. If we add  $9 + 5$ , we get 14 in an allusion to the 2 sets or families of 7 types of worlds that evolve more closely.

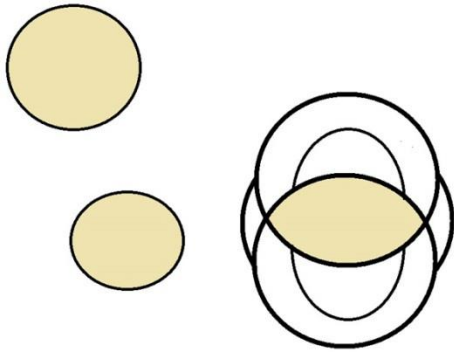

## **E 134) Circles and triangles :**

[Http://www.cropcircleconnector.com/2014/tetbury/tetbury2014a.html](http://www.cropcircleconnector.com/2014/tetbury/tetbury2014a.html)

In England in Tetbury Lane, Nr Charlton, Wiltshire, In July of 2014. In the foreground we notice that there are 12 small triangles that are projected towards the 3 vertices. Being that 12 for me means the 12 worlds of life still material present in 3 sets of 7 types of worlds. We also note that there are 9 streaky hubcaps with the silhouettes of 4 Larger triangles. and, 9 for me it means the worlds of already only spiritual life present in 3 Sets or families of 7 or 6 kinds of worlds. We also note that there are 4 circle silhouettes and + 1 clearer circle. Now, we see that if we calculate  $12 \times 3$  (sides of each triangle) we obtain 36, and this amount represents 6 sets of 6 types of worlds. If we add  $36 + 1$  (Central triangle) +  $4 + 1$  we obtain 42 That represents 6 sets of 7 types of worlds, that is, sets that already account for the encounter of their respective primitive world (7th) for their Worlds Schools (6th) as will happen with the sets which belongs to the Earth, where our planet, which is school, must find a primitive world. If we count  $9 + 12$ , we get the 3 Sets or families of seven kinds of worlds.  $4 + 1 + 4 + 9$  we get 18 in a reference to the 3 sets of 6 types of worlds. If you add  $9 + 1 + 1$ , you get 11 in a reference to the 11 attributes of the spirit. If we add  $12$  (smaller triangles) +  $1$  (central triangle) +  $4$  (larger triangles), we get 17 in an allusion to the first 17 spiritual categories that make their progress reincarnated necessarily. If we do  $21 + 3$  (sides of the central triangle) we obtain 24 in a reference to the 24 worlds of still physical life present in 6 sets or families of 7 types of worlds, ie the 42 worlds present in each "ring" of the Great "8" of August 2008. By making  $36 - 3$  (sides of the central triangle) we obtain 33 in a reference to the 33 spiritual categories.

## **E 135) 9 and 12 elements in Poland:**

[Http://www.cropcircleconnector.com/2014/Slawsko/Slawsko2014a.html](http://www.cropcircleconnector.com/2014/Slawsko/Slawsko2014a.html) Found in Poland in July of 2014 at Slawsko Lower (k Strzelna). Just below the title of this study we have a schematic drawing of the agro glyph and further down the photo of it. In the most complex part we have 7 elements, which refers us to the 1 sets reference with 7 kinds of worlds. If we add to the 7 the two side circles We obtain the amount of 9 that for me means a reference to the 9 worlds of already only spiritual life present in 3 Sets or families of 7 or 6 types of worlds. Now, if we do this: we clearly have an "8" digit in the more complex figure that adds up to 2 side caps present also in the more complex figure, we get the amount of 10. And if we add to the 10 The 2 side circles we obtain the amount of 12, which indicate to us the 12 worlds of life still material present in 3 sets of 7 types of worlds. Another thing is that if you consider only the digit "8" and add only the three larger parts that remain we get the amount of 11 in an allusion to the 11 attributes of the spirit. One more thing: Note that the drawing is inserted into 6 Cereal growing bands and 7 double tracks formed by the tractor tracks. In my view it is more a reference to the world Class 7 primitive and to the world Class 6 school, which by being more evolved is represented by the bands of cereal, that are wider. One more thing: if we add the digit "8" with the 7 parts that bind to it + 2 circles we have 17, in a reference to the first 17 spiritual categories that make their progress reincarnated necessarily.

## **E 136) Circles and Petals :**

[Http://www.cropcircleconnector.com/2014/Macmillan/Macmillan2014a.html](http://www.cropcircleconnector.com/2014/Macmillan/Macmillan2014a.html) In England in July 2014 in Macmillan Way, nr Rodmarton, Gloucestershire. In the outer part we have 20 petals in cereal standing and these have 3 sides then  $20 \times 3 = 60$ . We also have + 19 recesses of folded cereal. If we add the two, we get 79. And if we add  $79 + 5$  internal Circles we get 84, that is, the same number of planets expounded in the great "8" of August 2008 in your 2 "rings", that is, 6 sets of 7 Types of worlds. If we take 19 we have a reference to the three sets of six types of worlds where one of them already accounts for their primitive planet. If we add  $19 + 2$  inner circles of standing cereal we get 21 that mean for me 3 sets of 7 types of worlds. If we make the following account:  $19 - 2$  (Indoor cereal circles standing, we get) 17, In a reference to the first 17 spiritual categories. If we pay attention to the 6 circles present in the drawing we have 1 set with 6 kinds of worlds. If we add to the 6 the outer circle where the petals and the recesses are obtained 7, In an allusion to a sets of seven kinds of worlds. If we decrease from 19 the amount of 7 we get 12 in a reference to the 12 worlds of still physical life present in 3 sets of 7 types of worlds. If we add to the amount of 7 the link trace between the drawing and the only outer circle to this one we have 8, and if we subtract this from 19 we get 11, In a reference to the 11 attributes of the spirit. If we take 20 "petals" and decrease the 19 recesses we get 1, and if we add to this the amount of 8 we obtain 9 in a reference to the 9 planets of life already only spiritual present in 3 sets or families of 6 or 7 types of worlds. The three inner circles, in folded cereal, can show us the evolutionary difference between three worlds of the same spiritual category that belong, each, to a set of worlds of 3 that evolve more closely, as the great "8" tells us. In your 2 "rings". If we calculate  $19 \times 3$  (sides of the recesses) we obtain 57, from where we take that  $5 + 7 = 12$  and if we add to 6 (product of the sum of  $6 + 0$ ) We get 18 in a reference to 3 sets of 6 types of worlds, that is, sets that Still They do not account for the encounter of their respective primitive worlds.

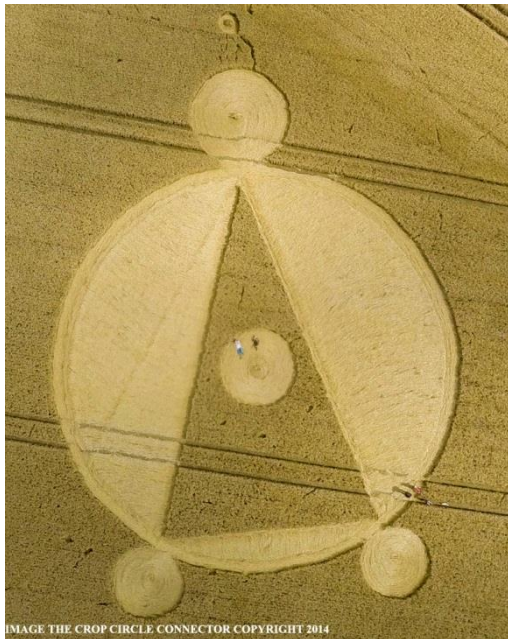

## **E 137) Five Truths :**

[Http://www.cropcircleconnector.com/2014/Ammersee/Ammersee2014a.html](http://www.cropcircleconnector.com/2014/Ammersee/Ammersee2014a.html)

In Ammersee, Bavaria, Germany In July 2014. 1- ) We have it in the outer part, which is repeated three times, lags at 120 degrees between their centers, we have 7 rhombus stylized cereals standing (very thin dark parts). These 3 parts add up to 21 i.e. they represent 3 Sets or families of 7 types of worlds. They are the 3 sets that evolve more closely as it is arranged in the large "8". 2-) After, on the same radial line as the previous, also repeated 3 times and lags of their equals, also at 120 degrees in the center line, we have 12 rhombuses stylized in folded cereal and 9 more rhombus ones in standing cereal. ie,  $9 + 12 = 21$ , once again the 3 sets repeated three times. 9 represents the worlds of already only spiritual life present in 3 Sets or families of 6 or 7 types of worlds, so represented with the standing cereal showing that life in them is integral and without oppressions. The 12th represents the 12 Worlds of life yet material present in 3 Sets or families of 7 kinds of worlds, and the cereal is folded representing the various oppressions that afflict the incarnate Spirit in these worlds. 3rd) We have, lagged in 60 degrees of the two previous parts, in your lines radial of center, and at 120 degrees each, the representation three times of 7 missed semicircles in its constructive form. That is, three more sets or families of 7 types of worlds, with the 4 outer circles representing the worlds of still material life and the 3 most internal ones of life already only spiritual. So what we have there is the representation, once again, of the three sets that evolve more closely hitched. 4th) Now, if we add the seven rhombuses of the 1st part with the 12 rhombuses second part we have 19, or the representation of 3 sets of 6 types of worlds where one of them has already found, through searches in their school world, the Primitive planet ( 7th). If we add to the 3 sets Of the first part with the 9 sets from the 2nd part we obtain 84 worlds equally to the great "8" Because  $12 \times 7 = 84$  Worlds.

## **E 138) 7 circles and 1 triangle:**

[Http://www.cropcircleconnector.com/2014/cowdown/cowdown2014a.html](http://www.cropcircleconnector.com/2014/cowdown/cowdown2014a.html)

In Cow Down, nr East Kennett, Wiltshire, England in August 2014. Notice how the figure has a large circle + 4 well defined circles, and near the circle of the tip of the triangle we have a circle of cereal folded that surrounds a circle of cereal standing, totaling 7 circles, representing a family or sets of 7 types of worlds. If we add to the 7th the triangle and + the 3 hubcaps we get 11 in a reference to the 11 attributes of the spirit. If we add 6 circles + 3 hubcaps we obtain 9 in a reference to the 9 worlds of life already only spiritual present in 3 Sets or families of worlds each with 6 or 7 worlds. If we add the 6 circles + 3 Hubcaps + 3 sides of the triangle we get 12 in a reference the amount of worlds of life still material present in 3 sets or families of 7 types of worlds.  $12 + 9 = 21$ , i.e. the 3 sets that evolve more closely. If we consider only the six circles we have a family or sets of worlds without the presence of the primitive world. In this case we should disregard the presence of the smaller circle, Cereal Standing which is what lies within the circle of cereal folded next to Circle on the tip of the triangle.

## **E139) 33 Spiritual Classes and 36 worlds:**

[Http://www.cropcircleconnector.com/2014/ridgeway2/ridgeway2014b.html](http://www.cropcircleconnector.com/2014/ridgeway2/ridgeway2014b.html)

The Ridgeway (2), Nr Hackpen Hill, Wiltshire, in August 2014 in England. We have to the center there are 32 tufts of cereal standing and another tuft in the outer circle totaling 33 tufts that equate to 33 spiritual categories. In a second count we add to the 33 the 3 concentric circles and obtain 36 that now represent 6 sets or families of 6 Types of Worlds each, that is, sets that do not account for still their respective primitive worlds. But why is a spiritual category represented alone in the outer circle? In my view it is because in the second count the outermost circle represents the world of the greatest evolution of the 6 sets. And this world is the kind of light pure and in this there are only spirits of the 26th category at the 33rd category. But, as I have been putting in my studies, the worlds evolve in a trailer and at this moment only remains in this world of greater evolution the action of the 33rd spiritual category, because all the other 7 categories have already been allocated in the world preceding this. In the evolutionary treadmill of the sets, because the worlds evolve by allocating the lower spiritual categories and in the worlds that are behind in the hierarchy of the sets that evolves in together. These spiritual categories are received as cutting edge or vanguard. and consequently, by ridding themselves of the lower categories the worlds receive the contribution of the higher categories coming in turn from worlds that Also They're evolving. That's why, I understand that, allocating in the world of light pure categories above the 33<sup>a</sup> leveraging the evolution of this. ie, Relationships pass from Intragalactic for Intergalatic and the world that is already first is completely dematerialized and penetrates the universe of absolute logic of Universal intelligence. And as its sets would be left with only 5 types of worlds a New World, Primitive (7th) has to be raised to the category of World School (6th) so that the sets will be again with 6 types of worlds. And then enter the encounter of the Earth with the

primitive planet (and 17) for the purpose of developing in it tasks of evolutionary nature, Aiding the Proto Civilizations In order for this to be elk to the condition of planet School, as it is in study No. 17. In my understanding the doctrine of Christian rationalism only mentions up to the 33 spiritual class because this is the last class linked to the dense material universe. In a simple analogy we can put that: if the worlds were "fixed" the spiritual classes would be descended and if the spiritual classes were "fixed" the worlds would be ascending. That is, The Spirits and Worlds Evolve and The Levels Spirituals are just structures Ideals Organizational support for the Eternal evolutionary movement of both.

## **E 140) Intersection of 7 circles in Sweden:**

[Http://www.cropcircleconnector.com/2014/lund/lund2014a.html](http://www.cropcircleconnector.com/2014/lund/lund2014a.html) Lund, Near Malmö, Sweden In August 2014. In the outermost part of this drawing there 3 types of characters (generated by the intersection of the 6 large circles) that repeat 6 times, therefore  $6 \times 3 = 18$ , or the representation of 3 sets of 6 types of worlds without any of them factoring still their primitive world (7th). More to the center we have 6 "petals" and 6 "Triangles" within 1 large central circle surrounded by 6 other large circles intersecting. If we add  $7 + 12$ , we get 19 in a reference to 3 sets or families of 6 types of worlds, one of which already accounts for its primitive world, found through the planet School of the sets. If we take 18 the amount of 7 (large circles) we get 11 in a reference to the 11 attributes of the spirit. If we add  $18 + 6$  We get 24 or the amount of living worlds still material found in 6 sets of 7 Types of worlds (42 worlds, as each of the rings of the Great "8" of August 2008, 18 is also the number of worlds of life already only spiritual present In six sets of six or seven kinds of worlds. If we make  $12$  (6 petals + the 6 "triangles" Central)-3 (quantity of elements generated by the intersection of the 6 large circles) we obtain 9 or the number of worlds of life already only spiritual present in 3 sets of 6 or 7 types of worlds, in other words, the sets that evolves more closely as it is in the big "8". If We take the 12 we have the amount of life worlds still material present in 3 sets of 7 types of worlds. If we add  $18 + 3$ , we get 21 the equivalent of 3 sets of 7 types of worlds that already account for their respective primitive worlds. If we add  $12 + 18$ , we get 30, and if we add the 3, we obtain

33 in a reference at 33 spiritual classes. Another analysis we can do is that outside the center circle we have 18 elements and within the central circle we have 24 elements (the 3 Sides Of the 6 "triangles" + 6 "petals"), this is equivalent to saying that in the center are the worlds of life still material (24) in a more timid position, denoting less evolution, and On the outside, in a more reach position we have the 18 worlds of life already only spiritual, since  $18 + 24 = 42$ . As we can see it's not some piece, or equipment or even hints about wormholes. We have to learn to elevate not only materially so that we can read and understand the spiritual circles. The fact is, we already have an answer for them. If We look at each Of the 6 peripheral circles to the central we have 2 "triangles" + 3 Sides of each one of them, in a total of 8, + 3 "Petals" and + 3 external parts to the central circle but within the in the circle in question, we have then 14 Parts that, If we multiply by 6 is = 84 (12 sets or families of 7 types of worlds), i.e. the same amount of the worlds depicted in the two "rings" of the Great "8".

## **E141) Official night of the UFOs in Brazil:**

This night, is considered by the national Ufology as the official night of the UFOs in Brazil. **21** Lights In the air space National... In my research according to the great "8" there are three sets of seven types of worlds that evolve more closely.

**19/05/1986...**  $19 + 05 = 24$ , or the 24 living planets still material existing in 6 sets of 7 types of worlds (i.e. the 42 worlds of each "ring" of the Great "8"), and the ones of life already only spiritual in these 6 sets add up to 18. **19** It is equivalent to 3 sets of 6 types of worlds where one of them already accounts for its primitive world. **86** It means that if you add  $8 + 6 = 14$  in a reference to the 2 sets of 7 types of worlds that evolve more closely. We still have that the 8 can be considered a reference to the universal logic and the 6 1 reference to a set of 6 types of worlds, this is, A sets that still does not account for its primitive World (7th). And we still have the year 1986, ie,  $8 + 6 = 14$ , and if added to the 19 We have 33, in a reference to the 33 spiritual categories. If we add  $1 + 4 + 3 + 3$ , We obtain 11 in a reference to the 11 attributes of the spirit. If we add up all the digits of the date we have  $1 + 9 + 5 + 1 + 9 + 8 + 6 = 39$ , from where we take that  $3 + 9 = 12$ , or the amount of life worlds still material present in 3 sets of 7 types of planets. Still in relation to the year of 86 we have to  $8 - 6 = 2$ , and if we relate it to the thousand that enunciates the century we have to  $19 + 2 = 21$  or the 3 sets of 7 types of worlds that evolve more closely hitched, such and which is in the big "8".

### **Addendum to "E 58) The 42 “elements” of the power circles III**

(This drawing also shows us that the worlds evolve from smaller evolutionary levels to the larger ones. We can see that three digits are formed "8" in the drawing, each of which consists of four semicircles. If we add  $(3 \times 8) + 42 + 6$  (small internal elements to the central disk), we obtain 72 in a reference to the 12 sets of 6 types of worlds. These 6 small parts within the center circle were not accounted for at first reading since they do not represent planets but a part still without development of the planets, as if the planets had within their bosom a portion of primitive civilizations. In relation to date (11-08-2002) We have to: 11 is a reference to the 11 attributes of the spirit.  $11 + 8 = 19$  i.e. 3 sets of 6 types of planets plus the primitive world.  $8 + (2 + 2) = 12$ , or the amount of living worlds still material present in 3 sets of 7 worlds.  $11 + 8 + 2 = 21$ , IE 3 Sets of 7 planets.  $(11 + 8) - 2 = 17$ , i.e. a reference to the first 17 spiritual categories. If we make a "play" mathematical we have to add  $2 + 2 = 22$  and if we add  $22 + 11$  We obtain the amount of 33 in an allusion to the 33 spiritual categories. We can still notice that there are, to form the figure, 6 peripheral circles and 1 circle to the center, a total of 7.

### **Addendum to " E 65) The star built in July 1999 in Roudway Hill England” of the Power circles III:**

(We have in each of the 14 tips 2 strokes and 1 circle in a total of 42 elements that equate the representation of 42 worlds or 6 sets of 7 Types of worlds).
